SECTION A

ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Intentions to plant summer grain crops for the 2008/09 production season

Figures on the intended plantings of summer crops for the 2008/09 production season were released by the Crop Estimates Committee (CEC) on 23 October 2008. Based on inputs received from seed companies, provincial departments of agriculture, a sample of producers, etcetera, the expected area to be planted to maize on commercial farms was 2,562 million ha, of which 1,600 million ha (62 %) were earmarked for white maize and 962 000 ha (38 %) for yellow maize. The commercial producers therefore intended to decrease the area planted to white and yellow maize by 137 000 ha (7,9 %) and 100 000 ha (9,4 %), respectively, as compared to the previous season. Farmers indicated that the main reasons for the decrease in area planted to maize are the restricted availability of credit and the cost of finance, higher input costs and the prevailing lower international maize prices. Apart from these reasons, the weather is also a decisive factor that will influence farmers' decisions to plant summer grain crops.

The areas of intended plantings of soya-beans, dry beans, sorghum, groundnuts, and sunflower seed show increases of 37,5, 23,3, 9,3, 6,1 and 3,9 %, respectively, as against plantings the previous season.

Intended plantings of summer grain crops: 2008/09 production season

Crop	Area planted 2007/08	Intended plantings 2008/09	Change 2008/09 vs 2007/08
	ha	ha	%
White maize	1 737 000	1 600 000	-7,9
Yellow maize	1 062 000	962 000	-9,4
Maize	2 799 000	2 562 000	-8,5
Sunflower seed	564 300	586 400	+3,9
Soya-beans	165 400	227 500	+37,5
Groundnuts	54 200	57 500	+6,1
Sorghum	86 800	94 900	+9,3
Dry beans	43 800	54 000	+23,3
Total	3 713 500	3 582 300	-3,53

Estimates are based on conditions at the middle of October 2008

Approximately 87 % of the total area planted to summer grain crops in South Africa during the past 3 years is located in the Free State, North West and Mpumalanga provinces – 38 % in the Free State, followed by 29 % in North West and 20 % in Mpumalanga.

Third production forecast for winter crops for the 2008 production season

According to the third production forecast for 2008, released by the CEC on 23 October 2008, the expected winter wheat crop was 2,106 million tons, which is 10,6 % or 201 000 tons higher than the final crop of 1,905 million tons of the previous season. The expected yield was 2,82 t/ha, as against 3,01 t/ha the previous season.

The main wheat production areas for 2008 are within the Western Cape with 350 000 ha (46,8 %), followed by the Free State with 280 000 ha (37,4 %). The expected yield for the Western Cape was 2,35 t/ha, as against 2,50 t/ha the previous season, and for the Free State 2,20 t/ha, as against 2,65 t/ha the previous season. The decrease is mainly the result of drier conditions having occurred in the southern parts of the Western Cape, as well as in the Free State.

The production forecast for malting barley was 188 799 tons. The area planted was estimated at 68 245 ha, while the expected yield was 2,77 t/ha.

The expected canola crop was 35 700 tons, the area estimate was 34 000 ha, with an expected yield of 1,05 t/ha.

Area estimate and third production forecast for winter cereals for the 2008 production season

Crop	Area planted	Third forecast	Area planted	Final crop	Change - tons
	2008	2008	2007	2007	2008 vs 2007
	(A)	(B)	(C)	(D)	(B)÷(D)
	ha	Tons	ha	Tons	%
Wheat	748 000	2 106 000	632 000	1 905 000	+10,6
Malting barley	68 245	188 799	73 360	222 500	-15,2
Canola	34 000	35 700	33 200	38 150	-6,4

2. ECONOMIC INDICATORS OF THE SA AGRICULTURAL SECTOR

Indicator (at current prices)	Oct. 06 to Sept 07	Oct. 07 to Sept 08	% change
Total gross farm income (R'million)	95 499	122 104	+27,9
Intermediate expenditure (R'million)	48 604	62 648	+28,9
Total farm cost (R'million)	66 990	82 363	+22,9
Net farm income (R'million)	32 173	42 507	+32,1
Domestic terms of trade (2000 = 1)	1,08	1,02	-5,6

Gross income from major products at current prices

Field crops (R'million)	Oct. 06 to Sept 07	Oct. 07 to Sept 08	% change
Maize	11 508	20 656	+79,5
Wheat	3 220	4 661	+44,8
Sugar cane	4 195	4 519	+7,7
Sunflower seed	788	3 850	+388,6
Tobacco	174	155	-10,9
All field crops	22 487	37 939	+68,7

Horticulture (R'million)	Oct. 06 to Sept 07	Oct. 07 to Sept 08	% change
Vegetables (including potatoes)	8 284	9 273	+11,9
Deciduous and other fruit	6 101	6 995	+14,6
Citrus fruit	5 012	5 869	+17,1
Viticulture	2 880	2 995	+4,0
Subtropical fruit	1 649	1 906	+15,6
All horticultural products	25 332	28 521	+12,6

Animal products (R'million)	Oct. 06 to Sept 07	Oct. 07 to Sept 08	% change
Poultry meat	14 932	17 808	+19,3
Cattle and calves slaughtered	12 810	12 742	-0,5
Milk	6 680	9 833	+47,2
Eggs	4 890	5 601	+14,5
Sheep slaughtered	2 611	2 638	+1,1
All animal products	47 680	55 644	+16,7

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 October 2007 until 30 September 2008. Aggregates are compared with the period 1 October 2006 to 30 September 2007.

Gross farm income

Gross income refers to that part of agricultural production marketed at basic prices. It also includes production for own consumption, valued at the same prices.

Gross income from all agricultural products amounted to R122 104 million for the 12 months that ended on 30 September 2008, which is 27,9 % higher than the previous 12 months. This increase can mainly be attributed to increases of 68,7, 16,7 and 12,6 % in the gross income from field crops, animal products and horticultural products, respectively.

The gross income from field crops increased by R15 452 million and amounted to R37 939 million. The income from maize rose by 79,5 % and that from wheat by 44,8 %. The gross income from sunflower seed increased by 388,6 %, while the income from tobacco decreased by 10,9 %.

The income from horticultural products increased by R3 189 million and amounted to R28 521 million. The income of farmers from citrus fruit; subtropical fruit; deciduous and other fruit; and vegetables rose by 17,1, 15,6, 14,6 and 11,9 %, respectively.

Income from animal products showed an increase of 16,7 %, from R47 680 million to R55 644 million. This increase is mainly the result of a higher income from milk, which increased by 47,2 %, from R6 680 million to R9 833 million, and from poultry meat, which rose by 19,3 %, from R14 932 million to R17 808 million.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of the goods and services that were purchased to be consumed or used as inputs during the production process.

Expenditure on all intermediate goods and services increased by 28,9 % to R62 648 million. Expenditure on farm feeds remained the biggest expenditure item, accounting for 23,0 % of total expenditure, followed by 18,0 % for fuel, 13,0 % for fertilisers, and 10,6 % for farm services. Large increases occurred in expenditure on fuel, which rose by 96,7 %, and expenditure on fertilisers, which rose by 76,4 %. These increases can mainly be attributed to price increases of 88,9 % for fuel and 57,1 % for fertilisers.

Prices received and paid by farmers

On average, prices received by farmers for their products increased by 20,3 %. The weighted average price of field crops rose by 32,4 %, mainly because of increases in the prices of winter grains, oilseeds, hay and cotton, which rose by 64,1, 62,1, 48,2 and 32,1 %, respectively. Prices of horticultural products increased by 12,1 %, prices of vegetables by 16,0 % and prices received for fruit by 12,8 %. Prices of animal products increased by 14,4 %, the average price of pastoral products rose by 6,3 %, that of milk

by 37,3 % and that of poultry meat by 9,7 %. Prices received for animals slaughtered for red meat increased by 9,1 %.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements and intermediate goods, increased by 27,5 %, compared to 9,7 % in the previous year. Prices of fuel showed the biggest increase of 88,9 %, followed by prices paid for fertilisers with an increase of 57,1 %, seed prices rose by 21,9 % and prices for packing materials by 18,1 %.

The increase in prices received compared to the increase in prices paid by farmers resulted in the weakening of the domestic terms of trade by 5,6 %.

Net farm income and cash flow

An increase of 27,9 % in gross farm income against an increase of 28,9 % in expenditure on intermediate production inputs resulted in a rise in farm profit by 32,1 % to R42 507 million. Interest payments increased by 11,3 % and labour and rent payments rose by around 5,4 and 5,3 %, respectively.

Conclusion

The gross income of farmers rose by 27,9 % from 2006/07 to 2007/08 (October to September), because of an increase of 68,7 % in income from field crops, 16,7 % from animal products and 12,6 % from horticultural products. The increased income can mainly be attributed to the higher prices that farmers received for their products, especially field crops.

Farming expenses rose by 28,9 % compared to the previous 12 months up to 30 September 2007, as a result of inputs such as fuel and fertilisers that showed big price hikes. The increase in the net income of farmers had a huge positive impact on the cash flow of farmers.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on the major fresh produce markets and to make comparisons between markets.

Market prices are determined by the interaction between supply and demand, which are influenced by various factors. Supply factors include climate, seasonal production, perishability of products, the reaction of producers to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and *per capita* income. Therefore, the seasonal pattern of quantities sold and prices realised may differ appreciably between the different markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Port Elizabeth Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the 5-year period 2003 to 2007.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets are available on request from Ms M Makaleng, Directorate Agricultural Statistics, tel. no. 012 319 8050, fax no. 012 319 8031, or e-mail: MahlatseMa@nda.agric.za.

Interesting herb: Oregano

Scientific name: *Origanum vulgare*

Common names: Oregano, Wild Marjoram

History: The name is derived from the Greek origanon. Oregano is native to Europe, the Mediterranean region and southern and central Asia, but it is cultivated worldwide. In addition to European oregano, there are several types of related species, including Greek/Turkish oregano (*Origanum onites*) and Mexican oregano (*Lippa graveolens*, *Lippa palmeri*). It is an ancient culinary herb whose name means "joy-of-the-mountain". It has been widely used in Europe as a spice in food and treasured for its value as a herbal supplement.

Description and cultivation: Oregano has dark green, oval-shaped leaves carried on sturdy green stems. They have a pungent, aromatic flavour that is very distinctive. It is a herb growing 20-80 cm tall, with opposite leaves 1-4 cm long. The flowers are purple, 3-4 mm long, produced in erect spikes. The plant grows well in full sun and well-drained soil. Oregano is frost hardy and remains green throughout winter. It needs to be watered once a week. To prevent woody growth, oregano must be harvested regularly. The leaves are used in cooking. The dried herb is often more flavoursome than the fresh one.

Culinary uses: It is often used in tomato sauces, with fried vegetables and grilled meat. It is also used in soups, vegetable dishes and scrambled eggs. Together with basil, it makes a considerable contribution to the distinctive character of many Italian dishes. It is usually used with hot and spicy foods. It adds flavour to Greek salad and is usually either used separately or added to a lemon-olive oil sauce. The dried or fresh oregano leaves can be made into a herbal tea.

Herbal uses: Oregano is used to relieve anxiety, headaches and insomnia. It is high in antioxidant activity. The leaves can be chewed to relieve sore throat and coughing. Oil extracted from oregano is used as an antiseptic. In the Philippines, oregano is commonly used as a medical plant for relieving children's cough.
