ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and third production forecast for summer crops for the 2017 production season

According to the third production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2017 production season, the expected commercial **maize** crop was 14,536 million tons, which is 86,9% or 6,757 million tons more than the 7,778 million tons of the 2016 season. The estimated area planted to maize by South African commercial maize producers during the 2017 season is 2,629 million ha—35,0% or 681 850 ha more than the 1,947 million ha planted the previous season. The expected yield is 5,53 t/ha, which is the highest yield ever.

The ratio of white to yellow maize plantings was estimated at 63:37. The estimated white maize plantings were 1,643 million ha, which is an increase of 61,9% from the previous season's plantings of 1,015 million ha. Yellow maize plantings were estimated to be 985 500 ha—5,7% more than the 932 000 ha for 2016.

During the 2017 production season, most of the country's maize crop was planted in the Free State (44,1%), North West (24,0%) and Mpumalanga (18,6%) provinces. The plantings of maize increased by 65,7%, from 700 000 ha to 1,160 million ha in the Free State Province, and remained unchanged at 490 000 ha in the Mpumalanga province. Plantings in the North West are estimated at 630 000 ha—an increase of 43,2% from the 440 000 ha planted for the 2016 season.

The production forecast for white maize was 8,618 million tons, which is 152,9% more than the 3,408 million tons of the previous season. The expected yield for white maize was 5,25 t/ha, as against 3,36 t/ha in 2016. In the case of yellow maize, the production forecast was 5,917 million tons, which is 35,4% more than the 4,370 million tons the previous season. The yield for yellow maize was expected to be 6,00 t/ha, as against 4,69 t/ha for 2016.

A **sunflower seed** crop of 853 470 tons was expected, which is 13,0% more than the 755 000 tons of the previous season. The area planted to sunflower seed was estimated at 635 750 ha, which is 11,5% lower than the 718 500 ha planted for 2016. The expected yield for 2017 was 1,34 t/ha, as against 1,05 t/ha in 2016.

The production forecast for **soybeans** was 1,233 million tons, which is 66,2% more than the 742 000 tons of the previous season. The estimated area planted to soybeans was 573 950 ha, which is 14,2% or 71 150 ha more than the 502 800 ha planted for 2016. The expected yield was 2,15 t/ha, as against 1,48 t/ha in 2016.

The expected **groundnut** crop was 86 600 tons, which is 389,8% more than the 17 680 tons of the 2016 season. The area planted to groundnuts was estimated at 56 000 ha, which is 147,8% or 33 400 ha more than the 22 600 ha planted the previous season. The expected yield was 1,55 t/ha, as against 0,78 t/ha in 2016.

The production forecast for **sorghum** was 153 480 tons—117,7% more than the 70 500 tons of the previous season. The area planted to sorghum was estimated to be 42 350 ha, which is 12,7% or 6 150 ha less than the 48 500 ha planted for 2016. The expected yield was 3,62 t/ha, as against 1,45 t/ha the previous season.

The production of **dry beans** was expected to be 67 150 tons—89,4% more than the 35 445 tons of the previous season. The estimated area planted was 45 050 ha, or 31,0% more than the 34 400 ha planted the previous season, with an expected yield of 1,49 t/ha for 2017, as against a yield of 1,03 t/ha in 2016.

Area estimate and third production forecast of summer crops: 2017 production season*

Crop	Area planted 2017	Third forecast 2017	Area planted 2016	Final crop 2016	Change – tons 2017 *vs* 2016
	ha	tons	ha	tons	%
White maize	1 643 100	8 618 400	1 014 750	3 408 500	+152,9
Yellow maize	985 500	5 917 300	932 000	4 370 000	+35,4
Total maize	2 628 600	14 535 700	1 946 750	7 778 500	+86,9
Sunflower seed	635 750	853 470	718 500	755 000	+13,0
Soya beans	573 950	1 233 130	502 800	742 000	+66,2
Groundnuts	56 000	86 600	22 600	17 680	+389,8
Sorghum	42 350	153 480	48 500	70 500	+117,7
Dry beans	45 050	67 150	34 400	35 445	+89,4

* Forecasts and estimates exclude the non-commercial sector.

Intended plantings of winter crops for the 2017 production season

Producers' intentions to plant winter cereals are based on the results of a non-probability survey conducted by the Directorate: Statistics and Economic Analysis of the Department of Agriculture, Forestry and Fisheries and reflects the position as at the middle of April 2017.

The figures for wheat represent the total number of hectares that are intended to be planted for grain, excluding any hectares that will be planted for fodder and grazing.

Early indications are that producers intend to plant 496 350 ha of **wheat** for the 2017 season. This is 2,4% or 12 015 ha less than 508 365 ha planted to wheat in 2016. The main producing areas are within the Western Cape with 325 000 ha (65%), followed by the Free State with 90 000 ha (18%) and the Northern Cape with 35 500 ha (7%).

The expected area planted to **malting barley** is 96 000 ha, which is 8,2% or 7 305 ha more than the 88 695 ha of the previous year. The expected area planted to **canola** is 90 000 ha, which is 32,2% or 21 925 ha more than the 68 075 ha planted in 2016.

Please note that the preliminary area estimate of winter crops for 2017 will be released on 26 July 2017.

Intended plantings of winter cereals for the 2017 production season

Crop	Intended plantings* 2017	Area planted 2016	Final crop 2016	Change – ha 2016 *vs* 2015
	ha	ha	tons	%
Wheat	496 350	508 365	1 910 000	-2,4
Malting barley	96 000	88 695	355 000	+8,2
Canola	90 000	68 075	105 000	+32,2

*Based on conditions at the middle of April 2017

2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	April 2015 to March 2016	April 2016 to March 2017	% change
Total gross farm income (R million)	236 303	257 686	+9,0
Intermediate expenditure (R million)	126 396	135 278	+7,0
Total farm cost (R million)	159 429	170 716	+7,1
Net farm income (R million)	79 405	93 227	+17,4
Domestic terms of trade (2010 = 1)	1,09	1,12	+2,8

Gross income from major products at current prices

	April 2015 to March 2016	April 2016 to March 2017	Change
Field crops	R million		%
Maize	25 777	26 400	+2,4
Wheat	5 409	6 971	+28,9
Sugar cane	6 042	7 793	+29,0
Sunflower seed	3 096	5 271	+70,2
Tobacco	488	591	+21,1
All field crops	51 980	57 638	+10,9
Horticulture

Milk	14 145	15 954	+12,8
Eggs	9 986	10 204	+2,2
Sheep slaughtered	6 013	6 670	+10,9
All animal products	113 649	122 155	+7,5

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic changes in the agricultural sector from the period 1 April 2015 to 31 March 2016 to the period 1 April 2016 to 31 March 2017.

Gross farming income

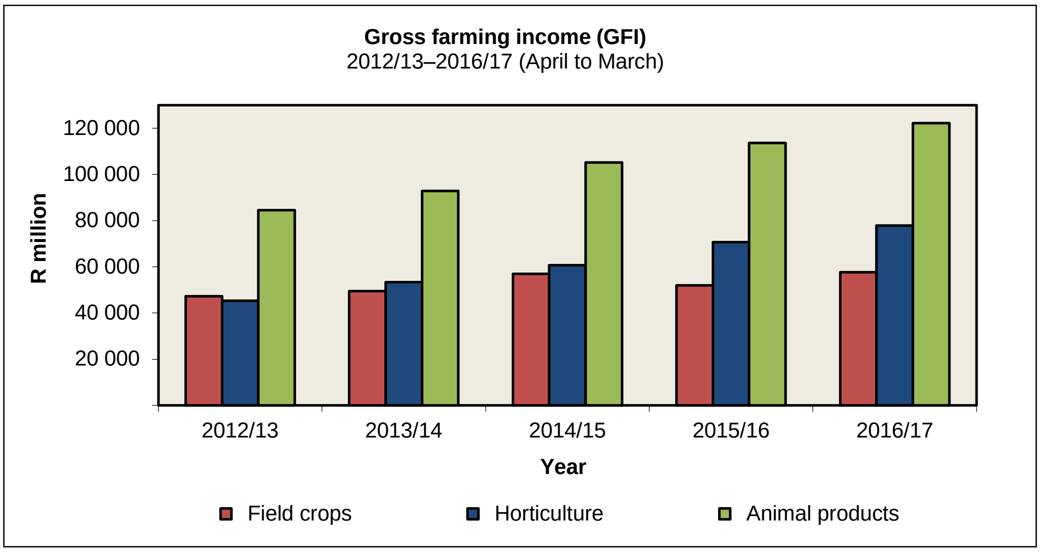
Gross farming income refers to the agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross income derived from all agricultural products increased by 9,0% and amounted to R257 686 million for the year ended 31 March 2017. This was mainly a result of the increase in income from field crops by 10,9%, horticultural products by 10,2% and animal products by 7,5%.

The increase in income from field crops was mainly due to the increase in income derived from sunflower seed by 70,2%, sugar cane by 29,0%, wheat by 28,9%, tobacco by 21,1%, maize by 2,4%, hay by 1,4% and soya beans slightly by 0,6%. However, the income from groundnuts decreased by 70,6%, cotton by 42,5%, dry beans by 38,9% and grain sorghum by 16,2%.

The main contributors to the increase in income from horticultural products were income from citrus fruit by 21,2%, vegetables by 14,8%, subtropical fruit by 12,2%, and deciduous and other fruit by 1,2%.

The income from animal products increased as the result of the increase in income from milk by 12,8%, sheep slaughtered by 10,9%, cattle and calves slaughtered by 9,9%, poultry meat by 5,7% and eggs by 2,2%.



Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of the goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 7,0% and amounted to R135 278 million for the period under review. This was due to the increase in expenditure on seed and plants, and building and fencing material by 10,0% each, packing material by 9,2%, farm feeds by 8,0%, fuel by 6,2%, farm services and animal health and crop protection by 6,0% each, maintenance and repairs of machinery by 5,1% and fertilisers by 3,0%.

Farm feeds had a largest share as an expenditure item, accounting for 29,2% of the total expenditure on intermediate inputs, followed by maintenance and repairs of machinery by 13,7%, farm services by 12,3%, fuel by 8,9%, seed and plants by 6,5%, animal health and crop protection by 6,2%, fertilisers by 5,0%, packing material by 4,7% and building and fencing material by 4,0%.

Prices received and prices paid by farmers, as well as terms of trade

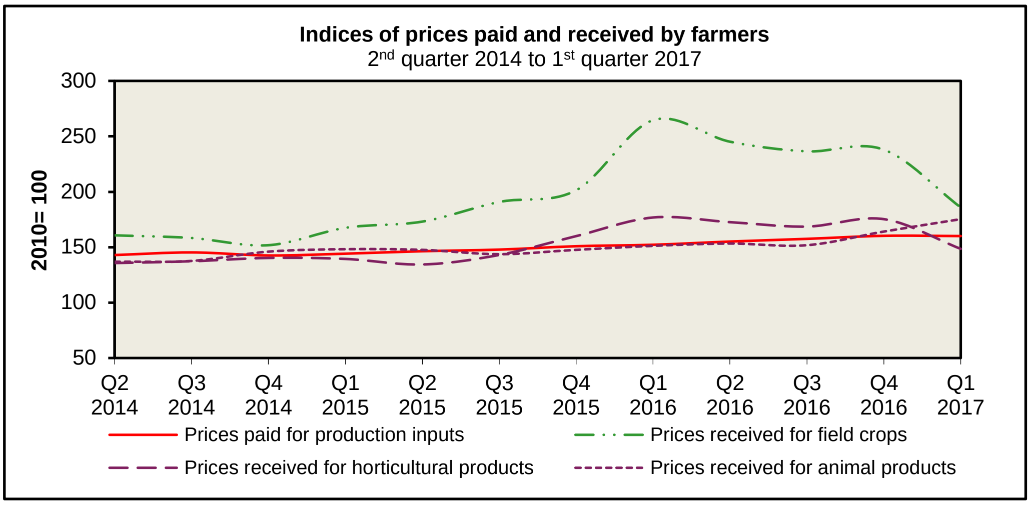
On average, prices received by farmers for their products increased by 8,9%. The weighted average price of field crops increased by 9,1%, mainly as a result of the increase in prices of sugar cane by 18,9%, dry beans by 16,6%, cotton by 14,1%, hay by 13,8%, tobacco by 12,4%, summer grains by 8,1%, winter grains by 5,1% and oilseeds by 3,9%.

The prices of horticultural products increased on average by 8,3% because of the increase in prices of fruit and vegetables by 11,5%, and 10,9%, respectively. The price of viticulture dropped by 22,2%.

The prices of animal products increased on average by 9,2% due to the increase in prices of pastoral products by 17,9%, milk by 10,7%, slaughtered stock by 10,6% and poultry by 7,1%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements and intermediate goods and services increased by 5,9% compared to 3,9% the previous year. Prices of tractors increased by 9,4%, packaging material and building material by 7,3% each, feeds by 6,6%, fencing material by 6,5%, trucks by 5,9%, fuel and animal health and crop protection by 5,4%, seeds by 5,3%, maintenance and repairs of machinery by 4,1% and fertilisers by 2,7%.

The 8,9% increase in prices received by farmers for their products and 5,9% increase in prices paid for their production inputs, resulted in an increase of 2,8% in the domestic terms of trade.



Net farm income and cash flow

The increase of 9,0% in gross farming income and the 7,0% increase in expenditure on intermediate production inputs resulted in net farming income to increase by 17,4%. Interest payments increased by 10,3% while labour costs and rent payments increased by 6,2% each.

The farmers' cash flow increased by 12,6% or to R94 432 million during the period under review, from R83 863 million in the previous period.

Conclusion

The gross farming income increased as a result of the increase in income derived from field crops, horticultural and animal products. Despite a decline in production levels of major agricultural products, the increase in income was largely caused by the increase in the prices of all agricultural products.

The decline in production of field crops by 7,2% was mainly a result of the decrease in production of groundnuts by 71,0%, dry beans (48,9%), grain sorghum (41,4%), maize (25,5%) and soya beans (21,5%). The products which contributed to a decrease in production of horticulture by 5,3%, were subtropical fruit by 16,0%, citrus fruit by 15,2%, viticulture by 4,7% and vegetables by 2,2%, while a decline in animal production by 1,5%, mainly influenced by the decrease in sheep slaughtered by 7,5%, poultry meat by 2,1%, eggs by 1,0% and cattle and calves slaughtered slightly by 0,3%.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on the major fresh produce markets and to make comparisons between markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Durban Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2012 to 2016.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Ms Mahlatse Makaleng

Interesting fruit: Peaches

Scientific name: *Prunus persica*

Common names: Peach, Flowering Peach, Ornamental Peach, Common Peach

History: Due to the botanical name Prunus persica, peaches are believed to be the natives of Persia but originally they belong to China. The cultivation of peaches has been a regular practice in Chinese culture since the early times.

Romans were introduced to the peach fruit by the Persians who brought this juicy fruit directly from China. In 16th century, Spanish explorers brought peaches to America from where the fruit eventually travelled in 17th century to France and UK. Today, peaches are highly grown for commercial purposes in America

Description: The peach (Prunus persica) is a deciduous tree native to the region of Northwest China between the Tarim Basin and the north slopes of the Kunlun Shan mountains, where it was first domesticated and cultivated. It bears an edible juicy fruit called a peach or a nectarine.

The leaves of the peach tree are simple, alternate, serrated, lanceolate, 7–15 centimetres (cm) long, and 2–3 cm broad. The flowers are produced in early spring before the leaves are paired. The flowers are 2,5–3 cm in diameter, white to lavender, with five petals.

The peach fruit has a single large seed encased in hard wood. The seed is red, oval shaped and 1,5-2cm thick. The fruit has yellow or whitish flesh with a delicate aroma and a velvety skin that bruises easily. Peaches, along with cherries, plums, and apricots, are classified as stone fruits or drupes.

Types of peaches:

Peaches are grown in various parts of the globe and are broadly classified in the following categories:

• Yellow-flesh peaches – This is one of the most popular varieties of peaches grown in USA. This type of peach has more acidic taste as compared to the white variety.

• White-flesh peaches – This variety is usually found in Asian markets and tends to have sweet taste with smooth flesh.

• Clingstone peaches – These types of peaches are juicy and sweet. It is mostly used for canning purposes.

• Freestone peaches – Mostly eaten as raw, freestone peaches are seen in all grocery stores.

• Nectarines – Though, most of the time nectarines are regarded as a separate species it is also a variety of peach. Nectarines have smooth skin due to distinctive genes.

Cultivation: Peach trees grow very well in a fairly limited temperate range. They have a chilling requirement of 33-45 degrees Fahrenheit that subtropical areas cannot satisfy, and on the other hand are susceptible to frost damage.

The trees themselves can usually tolerate temperatures to around −26°C to −30°C, although the following season's flower buds are usually killed at these temperatures, leading to no crop that summer. Flower bud kill begins to occur at temperatures between −15°C and −25°C depending on the cultivar and the timing of the cold, with the buds becoming less cold tolerant in late winter. Certain cultivars are tenderer and others can tolerate a few degrees more cold.

In addition, a lot of summer heat is required to mature the crop, with mean temperatures of the hottest month between 20°C and 30°C.

Health benefits:

1. Protects Eye Vision

Beta-carotene is responsible for eye health and peaches contain a good amount of this antioxidant, along with vitamins A and C. Regular consumption of peaches can improve your vision health by increasing blood circulation throughout your body.

The beta-carotene also nourishes and protects the retinas in your eyes from free radical damage, as well as helping to prevent cataracts and age-related macular degeneration.

2. Promotes Skin Health

Peaches area great source of vitamins A and C, which are highly essential for skin health. Vitamin A provides moisture to the skin, which improves the skin's texture making it soft and supple. Vitamin C is a powerful antioxidant that protects the skin from free radical damage.

Just one large peach a day can keep your skin glowing and flawless. You can also rub peaches directly on your skin to help get rid of dark circles and wrinkles.

3. Maintains Body Weight

Peaches are a fat-free and contain an average of only 68 calories. The high amount of sugar in peaches is natural and therefore does not have an adverse effect on health. If you are on a weight-loss mission, having peaches handy will help you avoid more fattening and processed snacks.

4. Prevents Cancer

Peaches are rich with antioxidants that help prevent cancerous cell growth. Peaches are known particularly for effectively protecting the body against lung, colon and oral cancers.

Culinary uses:

American cuisine is popular for using various delectable peach recipes. Peach jams, marmalades and pies are highly admired breakfast recipes in American food. Various desserts are also flavoured with peach.

In Chinese cuisine as well, peaches are widely used to make desserts and savoury dishes. Chicken and pork dishes are often glazed with peach sauce. Peach chutney is also a popular condiment served in Chinese cuisine. Along with Chinese and American cuisine, European cuisine also makes good use of peaches.
