SECTION A

ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and third production forecast for summer crops for the 2021 production season

According to the third production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2021 production season, the expected commercial **maize** crop was 16,096 million tons, which is 5,2% or 795 590 tons more than the 15,300 million tons of the 2020 season. The estimated area planted to maize by South African commercial maize producers during the 2021 season is 2,755 million ha—5,5% or 144 600 ha more than the 2,611 million ha planted the previous season. The expected yield is 5,84 t/ha.

The ratio of white to yellow maize plantings was estimated at 61:39. The estimated white maize plantings were 1,692 million ha, which is an increase of 4,7% from the previous season's plantings of 1,616 million ha. Yellow maize plantings were estimated to be 1,063 million ha—6,9% more than the 994 500 ha for 2020.

During the 2021 production season, most of the country's maize crop was planted in the Free State (48,2%), the North West (21,0%) and Mpumalanga (19,0%). The plantings of maize increased by 8,8%, from 1,220 million ha to 1,328 million ha in the Free State and by 2,6% in the North West, from 565 000 ha to 580 000 ha. Plantings in Mpumalanga are estimated at 525 000 ha—an increase of 2,3% from the 513 000 ha planted for the 2020 season.

The production forecast for white maize was 8,934 million tons, which is 4,5% more than the 8,548 million tons of the previous season. The expected yield for white maize was 5,28 t/ha, as against 5,29 t/ha in 2020. In the case of yellow maize, the production forecast was 7,162 million tons, which is 6,1% more than the 6,752 million tons the previous season. The yield for yellow maize was expected to be 6,73 t/ha, as against 6,79 t/ha for 2020.

A **sunflower seed** crop of 696 290 tons was expected, which is 11,7% less than the 788 500 tons of the previous season. The area planted to sunflower seed was estimated at 477 800 ha, which is 4,5% lower than the 500 300 ha planted for 2020. The expected yield for 2021 was 1,46 t/ha, as against 1,58 t/ha in 2020. The production forecast for **soya beans** was 1,794 million tons, which is 44,0% more than the 1,246 million tons of the previous season. The estimated area planted to soya beans was 827 100 ha, which is 17,3% or 122 100 ha more than the 705 000 ha planted for 2020. The expected yield was 2,17 t/ha, as against 1,77 t/ha in 2020.

The expected **groundnut** crop was 57 900 tons, which is 15,6% more than the 50 080 tons of the 2020 season. The area planted to groundnuts was estimated at 38 550 ha, which is 2,8% or 1 050 ha more than the 37 500 ha planted the previous season. The expected yield was 1,50 t/ha, as against 1,34 t/ha in 2020.

The production forecast for **sorghum** was 189 885 tons—20,2% more than the 158 000 tons of the previous season. The area planted to sorghum was estimated to be 49 200 ha, which is 15,8% or 6 700 ha more than the 42 500 ha planted for 2020. The expected yield was 3,86 t/ha, as against 3,72 t/ha the previous season.

The production of **dry beans** was expected to be 56 577 tons—12,7% less than the 64 800 tons of the previous season. The estimated area planted was 47 390 ha, or 5,5% less than the 50 150 ha planted the previous season, with an expected yield of 1,19 t/ha for 2021, as against a yield of 1,29 t/ha in 2020.

Area estimate and third production forecast of summer crops: 2021 production season*

Crop	Area planted 2021	Third forecast 2021	Area planted 2020	Final crop 2020	Change – tons 2021 vs 2020
	Ha	Tons	ha	Tons	%
White maize	1 691 900	8 933 690	1 616 300	8 547 500	4,52
Yellow maize	1 063 500	7 161 900	994 500	6 752 500	6,06
Total maize	2 755 400	16 095 590	2 610 800	15 300 000	5,20
Sunflower seed	477 800	696 290	500 300	788 500	-11,69
Soya beans	827 100	1 793 650	705 000	1 245 500	44,01
Groundnuts	38 550	57 900	37 500	50 080	15,62
Sorghum	49 200	189 885	42 500	158 000	20,18
Dry beans	47 390	56 577	50 150	64 800	-12,69

* Forecasts and estimates exclude the non-commercial sector.

Intended plantings of winter crops for the 2021 production season

Producers' intentions to plant winter cereals are based on the results of a non-probability survey conducted by the Directorate: Statistics and Economic Analysis of the Department of Agriculture, Land Reform and Rural Development and reflects the position as at the middle of April 2021.

The figures for wheat represent the total number of hectares that are intended to be planted for grain, excluding any hectares that will be planted for fodder and grazing.

Early indications are that producers intend to plant 512 500 ha of **wheat** for the 2021 season. This is 0,5% or 2 700 ha less than 509 800 ha planted to wheat in 2020. The main producing areas are within the Western Cape with 352 000 ha (64%), followed by the Free State with 77 000 ha (18%) and the Northern Cape with 35 000 ha (7%).

The expected area planted to **malting barley** is 95 000 ha, which is 33,0% or 46 690 ha less than the 141 690 ha of the previous year. The expected area planted to **canola** is 95 000 ha, which is 28,2% or 20 880 ha more than the 74 120 ha planted in 2020. Producers intend to plant 26 200 ha of cereal oats, which is 31,7% or 8 300 ha more than the 26 200 ha of the previous season.

Please note that the preliminary area estimate of winter crops for 2021 will be released on 28 July 2021.

Intended plantings of winter cereals for the 2021 production season

Crop	Intended plantings* 2021	Area planted 2020	Final crop 2020	Change – ha 2021 vs 2020
	ha	ha	Tons	%

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic changes in the agricultural sector from the period 1 April 2019 to 31 March 2020 to the period 1 April 2020 to 31 March 2021.

Gross farming income

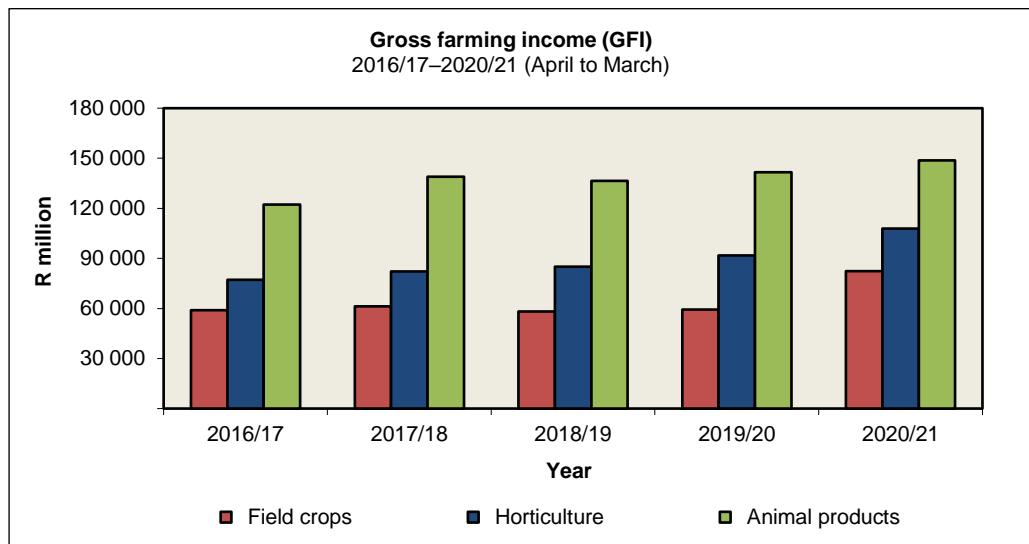

Gross farming income refers to the agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross farming income that was earned from all agricultural products increased by 15,8% and is estimated to be R339 005 million for the period ended 31 March 2021, largely because of the increase in income from field crops and horticultural products by 38,7% and 17,6%, respectively.

The increase of 38,7% in income from field crops was driven by the increase in income from groundnuts by 152,7%, wheat (62,1%), soya beans (61,0%), grain sorghum (49,9%), maize (44,1%), sunflower seed (37,7%), tobacco (22,1%), sugar cane (8,5%) and dry beans (8,0%).

The income from horticultural products increased by 17,6% due to the increase in income derived from citrus fruit by 37,9%, deciduous and other fruit by 23,9%, viticulture by 7,3%, vegetables by 6,2% and subtropical fruit by 5,5%.

The income from animal products increased by 5,1% due to the increase in income derived from milk by 15,7%, sheep slaughtered by 11,5%, cattle and calves slaughtered by 4,6%, poultry meat by 2,9% and eggs by 2,7%.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of the goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 6,6% to R172 243 million for the period ended 31 March 2021. The expenditure on seed and plants and building and fencing material increased by 10,0% each, farm feeds (9,1%), packing material (9,0%), animal health and crop protection and farm services (6,0%) each, fertilisers and fuel (3,0%) each, maintenance and repairs of machinery and implements (2,0%).

Farm feeds remained the largest expenditure item and accounted for 28,8% of the total expenditure on intermediate inputs, maintenance and repairs of machinery and implements (13,1%), farm services (12,1%), fuel (8,1%), seed and plants (7,4%), animal health and crop protection (6,2%), packing material (5,2%), building and fencing material (4,5%), fertilisers (4,4%).

Prices received and prices paid by farmers, as well as terms of trade

Prices earned by the farmers for their agricultural products increased on average by 4,6%, mainly due to the increase in prices of field crops and horticultural products by 11,2% and 4,4%, respectively.

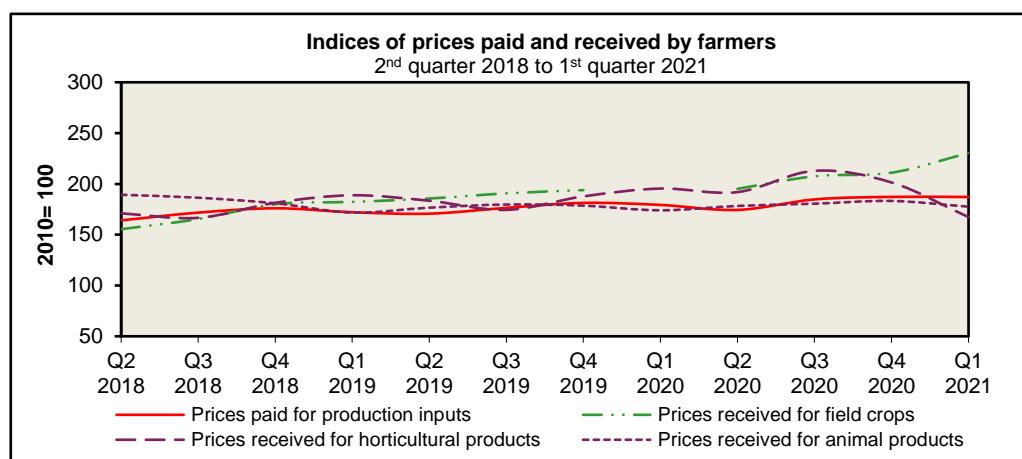

The increase of 11,2% in prices of field crops was the result of the increase in prices of tobacco by 37,0%, oilseeds (32,6%), sugar cane (14,5%), hay (13,6%), dry beans (13,5%), winter grains (13,3%) and summer grains (5,0%).

The prices of horticultural products increased by 6,9% due to the increase in prices of vegetables and fruit by 10,7% and 6,7%, respectively.

The prices of animal products increased by 1,5%, largely due to the increase in prices of milk by 18,2%. The prices of slaughtered stock remained unchanged, while those of poultry meat decreased slightly by 0,3%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements and intermediate goods and services increased by 3,6% for the period ended March 2021. Prices of feeds increased by 6,9%, seeds by 6,7%, building material by 5,8%, trucks by 4,4%, animal health and crop protection by 3,8%, fertilisers by 3,7%, packaging material by 3,0%, fencing material by 2,9%, maintenance and repairs by 2,4% and tractors by 1,6%.

Domestic terms of trade increased by 1,5% from 1,03 to 1,05 due to improved prices that were earned from agricultural products.

Net farm income and cash flow

The increase of 15,8% in gross farming income and 6,6% in expenditure on production inputs led to a substantial increase of 36,1% in net farming income, which was boosted by higher prices. Rent payment increased by 3,0%, labour remuneration by 2,9% and interest payments by 2,3%.

The farmers' cash flow increased significantly by 35,6% and is estimated at R132 029 million, compared to R97 377 million the previous period.

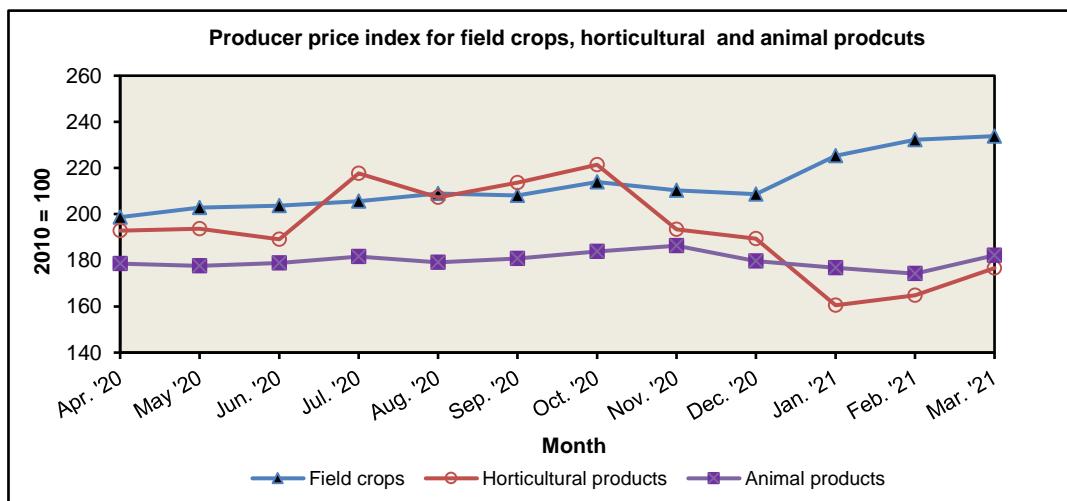

Conclusion

The increase in gross farming income was mainly driven by the increase in income from field crops and horticultural products by 38,7% and 17,6%, respectively. The increase in income was influenced by the increase of 6,4% in production levels, especially of field crops and prices by 5,3%.

Compiled by Ephaphrus Mankwane

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Tshwane Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2016 to 2020.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting Herb: Sage

Common names: garden sage; sage; true sage; salvia fina; salvia real; sauge; sauge officinale

Scientific names: *Salvia officinalis*

History: Sage has a very long and rich history due to both its medicinal and culinary uses. At one time, the French produced bountiful crops of sage which they used as a tea. The Chinese became enamoured with French sage tea, trading four pounds of Chinese tea for every one pound of sage tea. In 812 AD, sage was one of the plants deemed so important that Charlemagne ordered it planted on German Imperial farms, no doubt due to the lucrative trade business and for its medicinal popularity as well.

In ancient Rome, sage was considered to have substantial healing properties, particularly helpful in the digestion of the ubiquitous fatty meats of the time and was deemed a part of the official Roman pharmacopeia. The herb was used to heal ulcers, to help stop the bleeding of wounds and to soothe a sore throat. Many people in China used sage to treat colds, joint pain, typhoid fever and kidney and liver issues.

Description: Sage is a perennial shrub in the family Lamiaceae grown for its aromatic leaves which are used as herbs. Sage can be erect or grow along the ground and possesses a dense arrangement of woody stems with broad, elliptical, silvery-green leaves which are arranged alternately on the stems. The plant produces blue, pink or white flowers on a stalk. Sage plants generally grow up to 40 – 70 cm (16 – 28 in) in height and can live to be 15–20 years old, although they are usually replaced after four to five years in a garden when they become woody. Sage may also be referred to as common sage and originates from the Balkan Peninsula.

Cultivation: Sage (*Salvia officinalis*) is a hardy perennial that tastes aromatic and slightly bitter. It is easy to grow and only need three major requirements—plenty of sunshine, good drainage and good air circulation. Sage grows well in a variety of climates, and it can survive in temperatures as low as -18 °C (0 °F). It looks pleasant in a garden and grows pretty purple, pink, blue or white flowers in summer. When harvested and dried, it can be used as a stuffing for poultry, rabbit, pork and baked fish, and can also be used in sausages or meat loaves. One should learn how to grow sage to always have some readily on hand.

Food uses: Frying a strong herb like sage mellows its flavour. Fried sage can be crumbled over a dish at the last moment to heighten flavour. Sage can also be used to add an aromatic taste to sauces, compound butters, meat marinades, pastries and breads. Fresh sage leaves can be added to cocktails and teas for an instant hit of herbal flavour.

Health benefits:

- Helps with Alzheimer's disease and dementia symptoms
- Treats diabetes symptoms
- Balances cholesterol
- Combats obesity
- Treats menopausal symptoms
- Anti-diarrheal activity
