## SECTION A

### ECONOMIC INDICATORS AND TRENDS

#### 1. CROP ESTIMATES AND FORECASTS

##### Areas planted and fourth production forecast for summer crops for the 2022 production season

According to the fourth production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2022 production season, the expected commercial **maize** crop was 14,723 million tons, which is 9,8% or 1,592 million tons less than the 16,315 million tons of the 2021 season. The estimated area planted to maize by South African commercial maize producers during the 2022 season is 2,623 million ha—4,8% or 132 400 ha less than the 2,755 million ha planted the previous season. The expected yield is 5,61 t/ha.

The ratio of white to yellow maize plantings was estimated at 60:40. The estimated white maize plantings were 1,575 million ha, which is a decrease of 6,9% from the previous season's plantings of 1,692 million ha. Yellow maize plantings were estimated to be 1,048 million ha—1,5% less than the 1,064 ha for 2021.

During the 2022 production season, most of the country's maize crop was planted in the Free State (46,7%), the North West (20,7%) and Mpumalanga (19,6%). The plantings of maize decreased by 7,8%, from 1,328 million ha to 1,224 million ha in the Free State and by 6,2% in the North West, from 580 000 ha to 544 000 ha. Plantings in Mpumalanga are estimated at 515 000 ha—a decrease of 1,9% from the 525 000 ha planted for the 2021 season.

The production forecast for white maize was 7,553 million tons, which is 12,2% less than the 8,600 million tons of the previous season. The expected yield for white maize was 4,80 t/ha, as against 5,08 t/ha in 2021. In the case of yellow maize, the production forecast was 7,170 million tons, which is 7,1% less than the 7,715 million tons the previous season. The yield for yellow maize was expected to be 6,84 t/ha, as against 7,25 t/ha for 2021.

A **sunflower seed** crop of 963 000 tons was expected, which is 42,0% more than the 678 000 tons of the previous season. The area planted to sunflower seed was estimated at 670 700 ha, which is 40,4% higher than the 477 800 ha planted for 2021. The expected yield for 2022 was 1,44 t/ha, as against 1,42 t/ha in 2021.

The production forecast for **soya beans** was 1,931 million tons, which is 1,8% more than the 1,897 million tons of the previous season. The estimated area planted to soya beans was 925 300 ha, which is 11,9% or 98 200 ha more than the 827 100 ha planted for 2021. The expected yield was 2,09 t/ha, as against 2,29 t/ha in 2021.

The expected **groundnut** crop was 70 400 tons, which is 9,5% more than the 64 300 tons of the 2021 season. The area planted to groundnuts was estimated at 43 400 ha, which is 12,6% or 4 850 ha more than the 38 550 ha planted the previous season. The expected yield was 1,62 t/ha, as against 1,67 t/ha in 2021.

The production forecast for **sorghum** was 137 220 tons—36,2% less than the 215 000 tons of the previous season. The area planted to sorghum was estimated to be 37 200 ha, which is 24,4% or 12 000 ha less than the 49 200 ha planted for 2021. The expected yield was 3,69 t/ha, as against 4,37 t/ha the previous season.

The production of **dry beans** was expected to be 55 995 tons—2,9% less than the 57 672 tons of the previous season. The estimated area planted was 42 900 ha, or 9,5% less than the 47 390 ha planted the previous season, with an expected yield of 1,31 t/ha for 2022, as against a yield of 1,22 t/ha in 2021.

\* Forecasts and estimates exclude the non-commercial sector.

## Intended plantings of winter crops for the 2022 production season

Producers' intentions to plant winter cereals are based on the results of a non-probability survey conducted by the Directorate: Statistics and Economic Analysis of the Department of Agriculture, Land Reform and Rural Development and reflects the position as at the middle of April 2022.

The figures for wheat represent the total number of hectares that are intended to be planted for grain, excluding any hectares that will be planted for fodder and grazing.

Early indications are that producers intend to plant 538 350 ha of **wheat** for the 2022 season. This is 2,8% or 14 850 ha more than 523 500 ha planted to wheat in 2021. The main producing areas are within the Western Cape with 350 000 ha (65%), followed by the Free State with 95 000 ha (18%) and the Northern Cape with 35 250 ha (7%).

The expected area planted to **barley** is 109 100 ha, which is 15,2% or 14 370 ha more than the 94 730 ha of the previous year. The expected area planted to **canola** is 120 000 ha, which is 20,0% or 20 000 ha more than the 100 000 ha planted in 2021. Producers intend to plant 29 150 ha of **oats**, which is 19,6% or 7 100 ha less than the 36 250 ha of the previous season. The expected area planted to **sweet lupines** is 25 000 ha.

Please note that the preliminary area estimates of winter crops for 2022 will be released on 27 July 2022.

### 3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic changes in the agricultural sector from the period 1 April 2020 to 31 March 2021 to the period 1 April 2021 to 31 March 2022.

#### Gross farming income

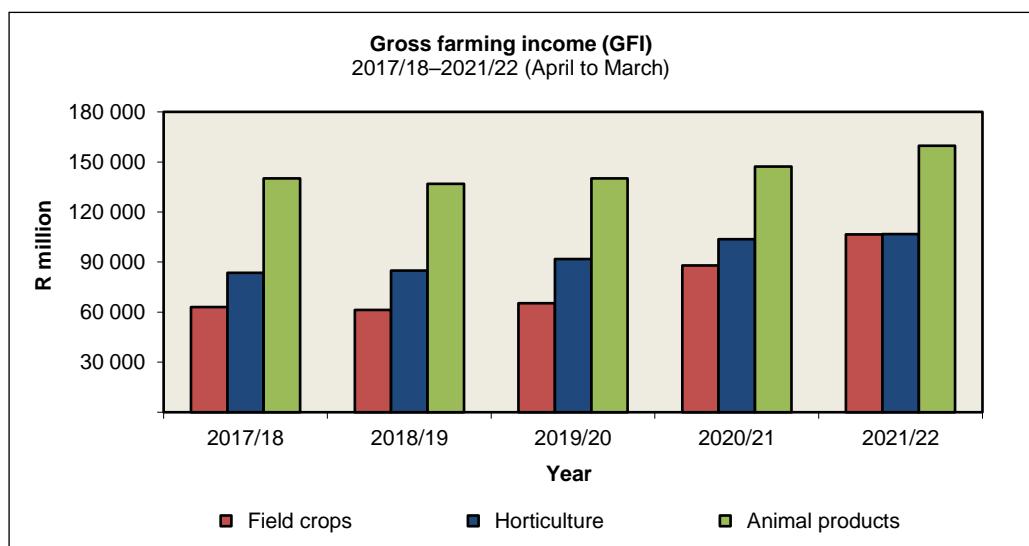

*Gross farming income refers to the agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.*

Gross farming income from all agricultural products showed an increase of R34 054 million (10,0%) for the period under review, when compared to the period ended March 2021. This can be attributed mainly to the increase in income from field crops by R18 702 million (21,3%), animal products by R12 346 million (8,4%) and horticultural products by R3 006 million (2,9%).

The increase of 21,3% in income from field crops was due to the increase in income made from maize by R11 935 million, sunflower seed (R3 671 million), wheat (R1 255 million), soya beans (R1 064 million), canola (R743 million), groundnuts (R637 million), grain sorghum (R337 million), cotton (R190 million) and sugar cane (R60,3 million). The income from hay, tobacco and dry beans decreased by R408 million (7,8%), R191 million (34,0%) and R17,6 million (1,9%), respectively.

The increase in income from animal products by 8,4% was driven by the increase in income from cattle and calves slaughtered by R5 426 million (14,1%), poultry meat by R2 458 million (4,9%), pigs slaughtered by R1 699 million (23,7%), milk by R1 468 million (7,5%), eggs by R285,2 million (2,5%) and sheep slaughtered by R111,2 million (1,4%).

The income from horticultural products increased by 2,9% due to the increase in income from deciduous and other fruit by R2 280 million (8,4%), viticulture by R515 million (24,7%), subtropical fruit by R377,2 million (7,2%) and vegetables by R193,4 million (0,7%).

#### Expenditure on intermediate production inputs

**Expenditure on intermediate production inputs refers to the value of the goods and services that were purchased to be consumed as inputs during the production process.**

Expenditure on intermediate goods and services increased by 7,5% and amounted to R207 569 million for the period ended 31 March 2022. The expenditure on seed and plants and building and fencing material increased by 10,0% each, farm feeds (9,0%), fertilisers (8,2%), maintenance and repairs of machinery and implements (8,0%), farm services (6,0%), fuel (5,2%), packing material (2,6%) and animal health and crop protection (0,5%).

Farm feeds was the largest expenditure item and accounted for 35,7% of the total expenditure on intermediate inputs, farm services (10,7%), fertilisers (10,5%), fuel (8,6%), maintenance and repairs of machinery and implements (7,1%), seed and plants (6,8%), building and fencing material (4,2%), animal health and crop protection (4,1%) and packing material (3,9%).

## **Prices received and prices paid by farmers, as well as terms of trade**

Prices earned by the farmers for their agricultural products increased on average by 5,1%, due to the increase in prices of field crops and animal products by 9,9% and 6,2%, respectively. The prices of horticultural products decreased slightly by 0,2%.

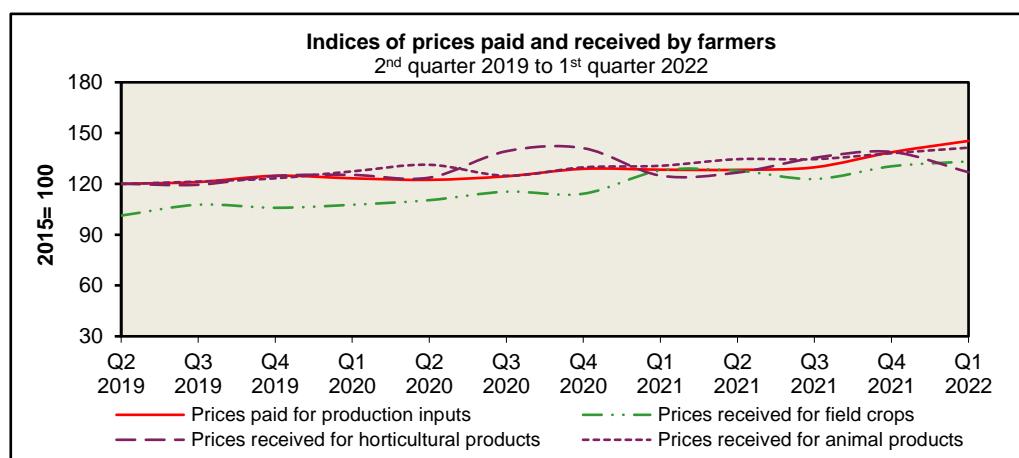

The increase in prices of field crops was driven by the increase in prices of dry beans by 28,8%, oilseeds by 19,5%, tobacco by 14,0%, summer grains by 9,9%, sugar cane by 8,7%, winter grains by 5,1% and cotton by 3,6%. The price of hay decreased by 5,6%.

The increase in prices of animal products was caused by the increase in prices of pastoral products by 28,3%, slaughtered stock (6,9%), dairy products (6,0%) and poultry meat (4,4%).

The prices of horticultural products decreased slightly by 0,2% mainly due to the decrease in prices of viticulture and fruit by 8,4% and 3,3%, respectively. The prices of vegetables showed an increase of 6,9%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements and intermediate goods and services increased by 7,5% for the period ended March 2022. Prices of fertilisers increased by 23,6%, fuel (9,9%), building material (6,9%), seed (5,7%), fencing material (5,4%), irrigation equipment (5,2%), tractors (4,8%), maintenance and repairs of machinery and implements (4,5%), trucks (4,2%), packing material (4,1%), animal health and crop protection (3,5%) and feeds (3,9%).

Domestic terms of trade decreased by 2,3% from 1,03 to 1,00 due to the increase of 7,5% in prices paid for production inputs as opposed to an increase of 5,1% in prices earned from agricultural products.

## **Net farm income and cash flow**

The increase of 10,0% in gross farming income and 7,5% in expenditure on production inputs led to a 19,0% increase in net farming income. Interest payment increased by 7,1%, labour remuneration (5,2%) and rent payment (5,1%).

The farmers' cash flow increased by 15,9% and is estimated to be R128 224 million, compared to R110 625 million the previous period.

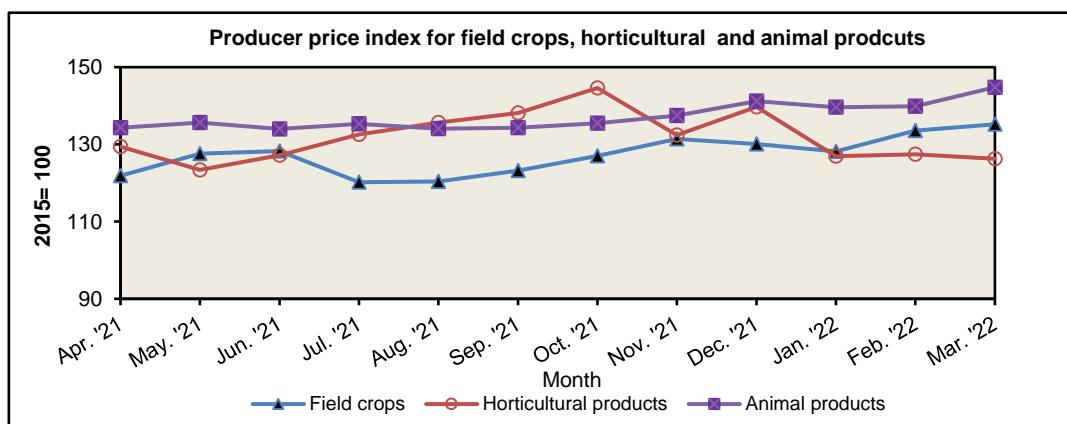

## **Conclusion**

The increase in gross farming income is attributed to the increase in production levels of field crops by 8,0% and horticultural products by 6,9% as well as the improved prices of field crops. Although the production levels of animal products showed a decline (0,8%), the higher prices from these products have also contributed to increased gross farming income.

## **SECTION B**

### **FRESH PRODUCE MARKETS OVERVIEW**

#### **FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS**

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold, and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Cape Town Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2017 to 2021.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

#### **Interesting Herb: Chamomile**

Common names: german chamomile; roman chamomile; pineappleweed; golden marguerite; anthemis cotula; anthemis arvensis; chandathus mixtus

Scientific names: Matricaria recutita

History: Chamomile originated in Europe and West Asia (Bisset 1994) and since ancient times, it has been highly valued by the Egyptians, Romans, and Greeks for its medicinal properties. The Egyptians considered the plant sacred and believed it was a gift from the God.

Chamomile comes in two plant varieties: Roman and German. Roman chamomile was not actually cultivated by the Romans; it was discovered by a British botanist and cultivated in the 16th century and was first listed in the pharmacopoeia of Würtenberg as a carminative, painkiller, diuretic and digestive aid.

Description: Chamomile plant is a tiny, daisy-like flower, blooming May to September; have a small yellow solid cone surrounded by white rays. The leaves are twice divided and have a feathery appearance. They are light green, and somewhat shiny. German chamomile Matricaria recutita, or Chamomilla recutita is a hardy, self-seeding annual herb.

Chamomile is used as a tonic and an antiseptic and in many herbal remedies, is made from English, or Roman, chamomile (*Chamaemelum nobile*) or German chamomile (*Matricaria chamomilla*). Several species are cultivated as garden ornamentals, especially golden marguerite, or yellow chamomile (*Cota tinctoria*).

Many members of the genus *Anthemis*, containing more than 100 species of Eurasian herbs, are also known as chamomile. They characteristically have yellow or white ray flowers and yellow disk flowers in compact flower heads. Mayweed, or stinking chamomile (*A. cotula*), is a strong-smelling weed that has been used in medicines and insecticides.

Chamomile contain the essential oil chamazulene, although German chamomile contains a higher concentrate. Both herbs have a sweet scent, reminiscent of apples.

Cultivation: Chamomile is easy to start from seed. Start seeds indoors about six weeks before the last expected frost. Chamomile seeds need light to germinate, so scatter the seeds and press them firmly onto the soil, but do not cover the seeds with soil. Water regularly and they should germinate in seven to 14 days.

About eight weeks after starting the seeds, when the plants are in full bloom, harvest the flowers with a chamomile rake. They can be dried by spreading them on a cloth and laying them in a shady area. If you prefer to harvest the flowers with about 7,62 centimetres of the stems attached, cut them off with scissors.

Food uses: You can flavor jams, candies and ice cream, or you could add it to liqueurs like vermouth. Then there are tasty recipes like: risotto, fish salad, soft breakfast cakes, sweet creams or biscuits you could make – all flavored with chamomile.

#### Health benefits:

- Reduces menstrual pain.
- Treats diabetes and lowers blood sugar.
- Slows or prevents osteoporosis.
- Reduces inflammation.
- Cancer treatment and prevention.
- Helping with sleep and relaxation.
- Treats cold symptoms.
