1. CROP ESTIMATES AND FORECASTS

Areas planted and sixth production forecast for summer crops for the 2021 production season

According to the sixth production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2021 production season, the expected South African maize crop was 16,431 million tons, which was 7,4% more than the 15,300 million tons of the 2020 season and 29,0% or 3,694 million tons more than the five-year average of 12,737 million tons up to 2020.

The estimated area that South African commercial producers planted to maize during the 2021 season was 2,755 million ha. This was 5,5% or 144 600 ha more than the 2,611 million ha planted in the previous season. Of this area, 1,328 million ha (48,2%) were in the Free State and 580 000 ha (21,0%) in the North West and 525 000 ha (19,0%) in Mpumalanga.

The plantings of maize in the Free State increased by an estimated 8,8%, from 1,220 million ha in 2020 to 1,328 million ha in 2021 and in the North West, it increased by 2,6%, from 565 000 ha to 580 000 ha. Plantings in Mpumalanga increased by an estimated 2,3%, from 513 000 ha in 2020 to 525 000 ha in 2021.

The ratio of white to yellow maize plantings for 2021 is 61:39, as against 62:38 the previous season. The estimated white maize plantings were 1,692 million ha, which were 4,7% more than the previous season's 1,616 million ha, while the yellow maize plantings were estimated to be 1,064 million ha—6,9% more than the 994 500 ha for 2020.

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 July 2020 to 30 June 2021. Aggregates are compared with the period 1 July 2019 to 30 June 2020.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross farming income from all agricultural products increased significantly by 20,4% to R369 418 million for the year ended 30 June 2021, from R306 798 million in the previous period. This was mainly as a result of the increase in income from field crops by 68,5%.

The increase in income from field crops was largely the result of the increase in income from tobacco by 166,8%, maize (103,2%), soya beans (67,6%), wheat (61,5%), grain sorghum (58,6%), hay (46,0%), groundnuts (44,9%), sunflower seed (17,9%) and sugarcane (15,7%).

The income from horticultural products increased by 7,8% and amounted to R107 460 million, due to the increase in income from citrus fruit by 13,4%, deciduous and other fruit by 7,2%, vegetables by 6,2%, viticulture by 3,9%, and subtropical fruit by 2,4%.

The income from animal products increased by 7,2% because of the increase in income from milk by 17,3%, cattle and calves slaughtered by 12,6%, sheep slaughtered by 7,9%, eggs by 2,3% and poultry meat by 1,1%.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 7,1% for the period under review, compared to an increase of 6,3% the previous period. The expenditure on farm feeds, seed and plants and building and fencing material increased by 10,0% each, packing material (9,0%), farm services and animal health and crop protection (6,0%) each, fertilisers (4,0%), fuel (3,6%) and maintenance and repairs of machinery and implements (2,0%).

Farm feed had the largest share as an expenditure item, accounting for 29,2%, maintenance and repairs of machinery and implements (12,9%), farm services (12,1%), fuel (8,0%), seed and plants (7,4%), animal health and crop protection (6,1%), packing material (5,2%), building and fencing material (4,5%) and fertilisers (4,4%).

Prices received and paid by farmers

The weighted average price received by farmers for their agricultural products increased by 6,7% as the result of the increase in prices of field crops and horticultural products by 15,7% and 7,0%, respectively.

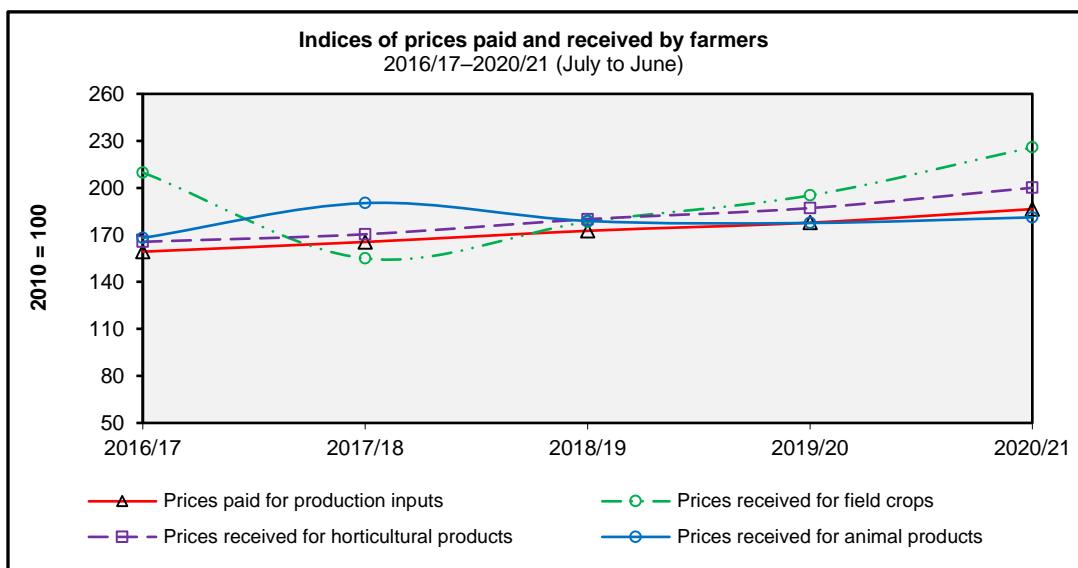

The 15,7% increase in the weighted average price of field crops was the result of the increase in prices of oilseeds by 34,8%, tobacco by 34,1%, sugarcane by 14,3%, hay by 15,2%, summer grains by 14,2%, dry beans by 12,6% and winter grains by 8,2%. The prices of cotton decreased by 1,1%.

The weighted average price of horticultural products increased by 7,0% due to the increase in the prices of vegetables and fruit by 16,5% and 4,2%, respectively. The prices of viticulture showed a decrease of 5,7%.

The weighted average price of animal products increased by 2,0%, largely because of the increase in prices of milk by 17,6%. The prices of pastoral products decreased by 3,5% and poultry meat slightly by 0,2%, while those of slaughtered stock remained unchanged.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements as well as intermediate goods and services increased by 4,8%, compared to 2,8% the previous period. The prices of building material increased by 8,0%, seeds (7,4%), feeds (7,2%), fencing material (4,8%), trucks (4,5%), packing material (4,1%), fertilisers (3,9%), animal health and plant protection (3,8%) and tractors (1,9%). The prices of maintenance and repairs of machinery and implements decreased by 15,5% and fuel slightly by 0,6%.

The domestic terms of trade increased by 1,0% due to the higher prices earned from agricultural products by the farmers.

Farming income and cash flow

The gross farming income increased by 20,4% and the expenditure of intermediate goods and services by 7,1%, which led to a significant increase of 46,0% in net farming income. Interest payments increased by 7,5% while labour costs and rent payment increased by 3,6% each.

The farmers' cash flow increased significantly by 45,6% and is estimated at R157 260 million for the period ended June 2021, compared to R107 984 million the previous period.

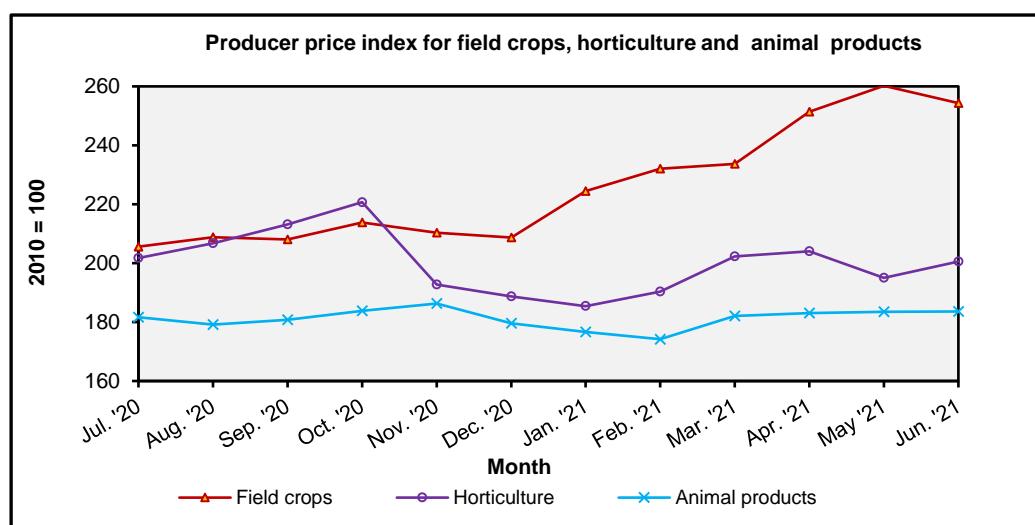

Conclusion

The increase of 20,4% in gross farming income was the result of a significant increase of 68,5% in income from field crops, which was largely driven by the increase in production levels by 33,1% and prices by 7,0%.

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Pietermaritzburg Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2016 to 2020.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting fruit: Rambutan

Common names: Rambutan

Scientific names: *Nephelium lappaceum*

History: Rambutans are native to Indonesia and Malaysia and have been growing wild since ancient times. Experts believe Arab traders encountered the fruit through trade routes between the 13th and 15th centuries and introduced rambutan into the Tanzanian archipelago of Zanzibar, located off the coast of East Africa.

The fruit were also spread throughout Southeast Asia, Oceania and were later brought to South America in the 19th century. Rambutan can now be found worldwide, including tropical regions of Asia, Southeast Asia, Australia, Africa, Central America, the Caribbean, South America and Hawaii. The fruit are primarily cultivated in Indonesia, Thailand and Malaysia, but they are also increasing in cultivation in Central America for export to the United States.

Description: Rambutans are small, oval to round fruits, averaging 3 cm to 5 cm in diameter and grow in loose, hanging clusters of 10 to 20 fruit. There are many different varieties of rambutan with unique appearances, ranging in colour from red, orange and yellow to a blend of these hues.

The fruit are enveloped in a semi-thick, firm and leathery rind, covered in soft, spine-like protrusions known as spinterns. Underneath the rind, the flesh varies from white, translucent, to pale pink and is succulent and slightly chewy, encasing a central, oblong, light brown seed wrapped in thin, papery layers. Rambutans are aromatic and have a sweet, fruity flavour with mild acidity, containing subtle notes of strawberries and grapes.

Cultivation: Rambutans are adapted to warm tropical climates, around 22 °C –30 °C, and are sensitive to temperatures below 10 °C. It is grown commercially 12° – 15° of the equator. The trees grow well at elevations up to 500 m above sea level, and does best in deep soil, clay loam or sandy loam rich in organic matter. They grow on hilly terrain where there is good drainage.

Health benefits: The vitamins, minerals and antioxidants in rambutans can provide vital nutritional benefits. For example, folate is an important vitamin essential for healthy cell division and DNA duplication.

Rambutans are also full of potassium, a mineral that helps heartbeat, kidney function and muscles contracting.

Vitamin B3 plays an important role in carbohydrate metabolism. Carbohydrate metabolism is the process of converting carbohydrates into energy and power.

Vitamin C contains antioxidants needed by the skin, where antioxidants serve to neutralise free radicals that accumulate as a result of exposure to sunlight. Vitamin C, combined with other minerals, can improve some of the signs of aging, including in the formation of fine lines, uneven pigmentation, skin colour and texture.
