1. CROP ESTIMATES AND FORECASTS

Areas planted and sixth production forecast for summer crops for the 2024 production season

According to the sixth production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2024 production season, the expected South African maize crop was 13,333 million tons, which was 18,9% less than the 16,430 million tons of the 2023 season and 10,9% or 1,625 million tons less than the five-year average of 14,958 million tons up to 2023.

The estimated area that South African commercial producers planted to maize during the 2024 season was 2,636 million ha. This was 1,9% or 50 150 ha more than the 2,586 million ha planted in the previous season. Of this area, 1,250 million ha (47,4%) were in Free State, 530 000 ha (20,1%) in North West and 520 000 ha (19,7%) in Mpumalanga.

The plantings of maize in Free State increased by an estimated 5,8%, from 1,181 million ha in 2023 to 1,250 million ha in 2024 and in North West, it decreased by 4,7%, from 556 000 ha to 530 000 ha. Plantings in Mpumalanga increased by an estimated 2,3%, from 508 500 ha in 2023 to 520 000 ha in 2024.

The ratio of white to yellow maize plantings for 2024 is 59:41, the same as the previous season. The estimated white maize plantings were 1,555 million ha, which were 2,2% more than the previous season's 1,521 million ha, while the yellow maize plantings were estimated to be 1,081 million ha—1,6% more than the 1,065 million ha for 2023.

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 July 2023 to 30 June 2024. Aggregates are compared with the period 1 July 2022 to 30 June 2023.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross farming income that was earned from all agricultural products increased by R6 186 million (1,4%) and amounted to R452 100 million for the period ended 30 June 2024, compared to R445 915 million in the previous period. This can be attributed mainly to the increase in income from horticultural and animal products by 10,3% and 6,1%, respectively.

Income from field crops decreased by R17 699 million or 12,7% and was estimated to be R121 952 million. This was the result of the decrease in income derived from maize by R11 915 million (16,0%), soya beans by R5 531 million (26,7%), wheat by R2 110 million (15,7%), sunflower seed by R634 million (9,5%), canola by R231,6 million (10,3%), groundnuts by R71,8 million (14,1%) and cotton by R7,5 million (2,0%).

The income earned from horticultural products increased by 10,3%. The main contributors were the increases in income from citrus fruit which increased by 14,0%, vegetables by 11,3%, deciduous and other fruit by 6,2% and subtropical fruit by 4,8%.

The income from animal products increased by 6,1%, mainly due to the increase in income from eggs by 19,0%, milk (12,9%), poultry meat (10,0%) and pigs slaughtered (9,8%).

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 1,2% and is estimated at R249 664 million. This was due to the increases in expenditure on seed and plants and building and fencing material by 10,0% each, animal health and crop protection by 8,8%, maintenance and repairs of machinery and implements by 8,0%, packing material by 7,9%, farm services by 6,0% and fuel by 5,4%. The expenditure on farm feed and fertilisers decreased by 6,0% and 2,6%, respectively.

Farm feeds had the largest share of 34,5% as an expenditure item, followed by fertilisers (12,1%), farm services (10,2%), fuel (8,6%), maintenance and repairs of machinery and implements and seed and plants (7,0%) each, building and fencing material (4,3%), animal health and crop protection (4,2%) and packing material (4,0%).

Prices received and paid by farmers

The prices received from the agricultural products increased on average by 5,5% in 2023/23, compared to the increase of 11,5% in 2022/23.

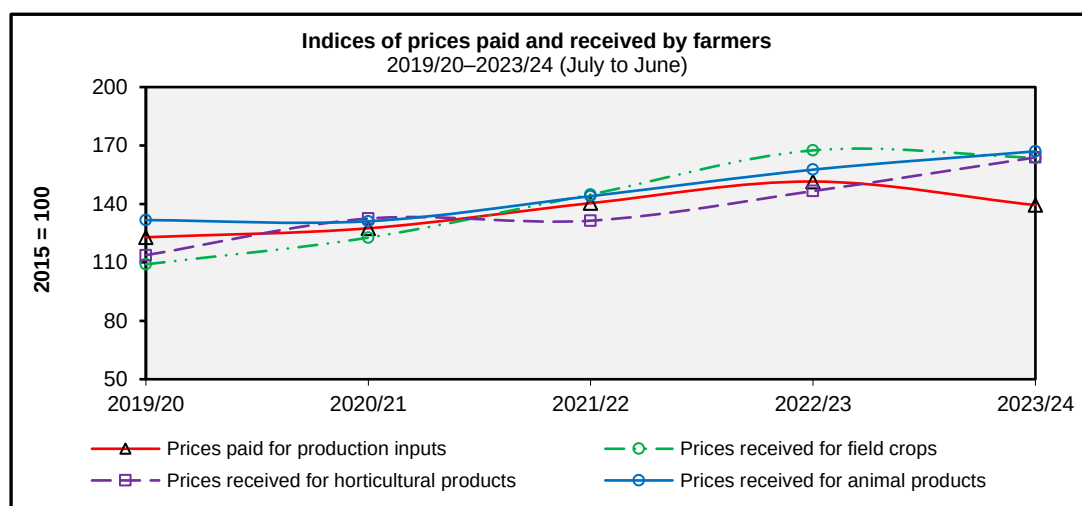

The weighted average price of field crops decreased by 2,2% which was mainly due to the decrease in prices of winter and summer grains by 10,0% and 6,7%, respectively. The prices of sugar cane increased by 19,8%, oilseeds by 12,1%, dry beans by 5,3% and cotton by 1,3%.

The weighted average price of horticultural products increased by 11,8% and was driven by the increase in prices of fruit by 13,0%, vegetables (10,7%) and viticulture (9,7%).

The weighted average price of animal products increased by 6,0% due to the increase in the price of poultry meat by 18,8%. The prices of slaughtered stock decreased by 4,7% and pastoral products by 4,1%, while the price of milk remained unchanged.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements as well as intermediate goods and services showed a decrease of 7,9% for the period ended under review, compared to the increase of 7,9% the previous period. This was largely influenced by the decrease in prices of animal health and crop protection by 21,6% and fertilisers by 10,0%, feeds 4,4%.

The domestic terms of trade increased by 15,5% from 1,03 to 1,19 due to better prices that were received from agricultural products.

Farming income and cash flow

The gross farming income increased by 1,4% against the increase of 1,2% in expenditure on production inputs which led to the increase of 1,8% in net farming income. Interest payments increased by 11,4%, rent payments by 5,4% and labour remuneration by 5,3%.

The farmers' cash flow showed a decrease of 1,4% to R120 443 million for the period ended June 2024, compared to R122 158 million the previous period.

Conclusion

The gross income increased by 1,4% mainly due to the increase in income earned from horticultural and animal products by 10,3% and 6,1%, respectively. Although the production levels of horticultural and animal products decreased, the increase in income was largely driven by the increased prices. The decrease in income from field crops was due to the decrease in prices and the production levels.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold, and prices realised, may differ considerably among the various markets.

Detailed information regarding fruit and vegetables sold on the markets is available on request from:
Directorate: Statistics and Economic Analysis.
