SECTION A

ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Intended plantings of summer grain crops for the 2019 production season

Figures on the intended plantings of summer crops for the 2019 production season were released by the Crop Estimates Committee (CEC) on 25 October 2018. Based on inputs received from a sample of producers, the area expected to be planted to maize on commercial farms was 2,448 million ha, of which 1,373 million ha (56%) were earmarked for white maize and 1,075 million ha (44%) for yellow maize. The commercial producers intended to increase the area planted to white maize by 105 300 ha (8,3%) and yellow maize plantings by 24 250 ha (2,3%) from the previous season.

Producers indicated that more maize, especially white maize, will be planted for the 2019 season, mainly because of crop rotation practices.

In the case of sunflower seed, intended plantings were estimated at 575 000 ha, which is 4,4% or 26 500 ha less than the 601 500 ha planted the previous season.

The intended plantings of soya beans showed an increase of 8,2% from the area planted the previous season, from 787 200 ha to 851 800 ha.

The intended plantings of groundnuts were 11,2% lower than the area planted the previous season, from 56 300 ha to 50 000 ha.

The plantings of sorghum were expected to increase by 49,3%, from 28 800 ha to 43 000 ha.

The intended plantings of dry beans also showed an increase of 12,4% from the area planted the previous season, from 53 360 ha to 60 000 ha.

Summary of intended plantings of summer grain crops: 2019 production season

Crop	Intended plantings 2019	Area planted 2018	Change 2019 vs 2018
	ha	ha	%
White maize	1 373 400	1 268 100	+8,3
Yellow maize	1 075 000	1 050 750	+2,3
Total maize	2 448 400	2 318 850	+5,6
Sunflower seed	575 000	601 500	-4,4
Soya beans	851 800	787 200	+8,2
Groundnuts	50 000	56 300	-11,2
Sorghum	43 000	28 800	+49,3
Dry beans	60 000	53 360	+12,4
Total	4 028 200	3 846 010	+4,7

Estimates are based on conditions by the middle of October 2018

Approximately 87% of the total area planted to summer grain crops in South Africa during the past three years was located in the Free State (44%), North West (22%) and Mpumalanga (21%) provinces.

Third production forecast for winter crops for the 2018 production season

According to the third production forecast for 2018 released by the CEC on 25 October 2018, the expected wheat crop was 1,862 million tons, which is 21,3% or 327 400 tons more than the crop of 1,535 million tons of the previous season. The expected yield was 3,70 t/ha, as against 3,12 t/ha the previous season.

The main wheat producing areas for 2018 are within the Western Cape with 318 000 ha (63,2%), followed by the Free State with 100 000 ha (19,9%). The expected yield for the Western Cape was 2,85 t/ha, as against 1,80 t/ha the previous season and for the Free State 3,65 t/ha, compared to 4,20 t/ha.

For the 2018 production season, weather conditions across South Africa's wheat growing areas have been fairly favourable.

The production forecast for malting barley was 396 340 tons. The area planted was estimated at 119 000 ha, while the expected yield was 3,33 t/ha.

The expected canola crop was 115 500 tons, while the area estimate was 77 000 ha, with an expected yield of 1,50 t/ha.

Area and production estimates for winter cereals: 2018 vs the 2017 production season

Crop	Area planted 2018	Third forecast 2018	Area planted 2017	Final crop 2017	Change – tons 2018 vs 2017
	(A)	(B)	(C)	(D)	(B)÷(D)
	ha	tons	ha	tons	%
Wheat	503 350	1 862 400	491 600	1 535 000	+21,3
Malting barley	119 000	396 340	91 380	307 000	+29,1
Canola	77 000	115 500	84 000	93 500	+23,5
Total	699 350	2 374 240	666 980	1 935 500	+22,7

2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	Oct. '16 to Sep. '17	Oct. '17 to Sep. '18	% change
Total gross farming income (R million)	274 367	285 426	+4,0
Expenditure on intermediate goods and services (R million)	139 627	148 683	+6,5
Total farming cost (R million)	176 260	183 026	+3,8
Net farming income (R million)	101 776	109 360	+7,5
Domestic terms of trade (2010 = 1)	1,09	1,06	-2,8

Gross income from major products at current prices

Field crops (R million)	Oct. '16 to Sep. '17	Oct. '17 to Sep. '18	% change
Maize	31 481	23 236	-26,2
Wheat	7 107	4 922	-30,7
Sugar cane	8 184	8 041	-1,7
Sunflower seed	4 010	3 820	-4,7
Tobacco	605	689	+13,8
All field crops	65 069	60 527	-7,0
Horticulture (R million)			
Vegetables (including potatoes)	21 728	23 223	+6,9
Deciduous and other fruit	19 503	20 000	+2,5
Citrus fruit	19 166	20 427	+6,6
Viticulture	5 748	5 101	-11,3
Subtropical fruit	3 984	4 455	+11,8
All horticultural products	78 200	82 129	+5,0
Animal products (R million)			
Poultry meat	42 806	47 168	+10,2
Cattle and calves slaughtered	34 463	37 562	+9,0
Milk	16 888	17 367	+2,8
Eggs	10 338	12 622	+22,1
Sheep slaughtered	7 007	7 084	+1,1
All animal products	131 098	142 770	+8,9

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 October 2017 to 30 September 2018. Aggregates are compared with the period 1 October 2016 to 30 September 2017.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross farming income from all agricultural products increased by 4,0% to R285 426 million for the period ended 30 September 2018, from R274 367 million the previous corresponding period. This was mainly because of the increase in income derived from animal and horticultural products by 8,9% and 5,0%, respectively.

The income made from field crops showed a decrease of 7,0% and was estimated at R60 527 million, from R65 069 million. This was largely influenced by the decrease in income from groundnuts by 35,45%, wheat (30,7%), maize (26,2%), grain sorghum (14,6%), sunflower seed (4,7%) and sugar cane (1,7%).

The income earned from horticultural products increased by 5,0% to R82 129 million and was mainly because of the increase in income from subtropical fruit by 11,8%, vegetables by 6,9%, citrus fruit by 6,6% and deciduous and other fruit by 2,5%.

The increase of 8,9% in income earned from animal products was mainly driven by the increase in income from eggs by 22,1%, poultry meat by 10,2%, cattle and calves slaughtered by 9,0%, milk by 2,8% and sheep slaughtered by 1,1%.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 6,5% to R148 683 million. This increase was largely because of the increase in expenditure on seed and plants by 10,0%, packing material (9,0%), maintenance and repairs of machinery and implements (8,2%), building and fencing material (7,9%), farm services and animal health and crop protection (6,0%) each, farm feeds (4,8%), fuel (3,2%) and fertilisers (3,0%).

Farm feeds had the largest share as an expenditure item, accounting about 28,9% of the total expenditure, maintenance and repairs of machinery and implements (13,8%), farm services (12,2%), fuel (8,5%), seed and plants (6,8%), animal health and crop protection (6,2%), packing material (4,9%), fertilisers (4,8%) and building and fencing material (4,1%).

Prices received and paid by farmers

Prices received by farmers for their agricultural products increased on average by 1,0% during the period under review, compared to a slight increase of 0,4% the previous year.

The weighted average price of field crops decreased substantially by 17,3%, mainly due to the decrease in the prices of summer grains (26,3%), oilseeds (12,4%), sugar cane (10,6%), winter grains (4,2%), tobacco (4,1%), hay (3,4%) and dry beans (1,9%).

The weighted average price of horticultural products increased by 4,6%, as the result of the increase in the prices of viticulture by 17,1% and vegetables by 10,1%. Prices of fruit decreased slightly by 0,2%.

The weighted average price of animal products increased by 8,2%, and was caused by the increase in the prices of pastoral products by 31,3%, poultry by 10,7% and slaughtered stock by 6,2%. The prices of milk showed a decrease of 2,1%.

The prices paid for farming requisites, including machinery and implements, intermediate goods and services and material for fixed improvements, increased by 4,3%, compared to 4,5% the previous period. The prices of animal health and crop protection increased by 9,1%, trucks by 8,1%, seeds and packaging material by 5,7% each, fuel by 5,4%, fencing material by 5,1%, building material by 5,0%, maintenance and repairs of machinery and implements by 4,3%, tractors by 3,1%, fertilisers by 2,6% and feeds by 2,0%.

The domestic terms of trade decreased by 2,8%, due to higher production costs, which increased by 4,3%, more than the prices received by the farmers for their agricultural products (1,0%).

Farming income and cash flow

The increase of 4,0% in gross farming income and 6,5% in expenditure on intermediate production inputs resulted in an increase of 7,5% in the net farming income. Interest payments increased on average by 8,6%, labour costs by 6,0% and rent payment by 4,5%.

The farmers' cash flow increased slightly on average by 0,1% to R105 893, compared to the increase of 14,4% the previous period.

Conclusion

The increase in gross farming income was as a result of both increases in income earned from animal and horticultural products by 8,9% and 5,0%, respectively. Significant increases were in pastoral products (31,3%), viticulture (17,1%), poultry meat (10,7%), vegetables (10,1%), and slaughtered stock (6,2%). Production levels, especially of subtropical fruit (22,9%), citrus fruit (9,8%), milk (5,4%), poultry meat (3,1%) and vegetables (1,7%), also contributed to the increase in gross farming income.

On the other hand, a decrease in income from field crops was largely driven by decreases in prices of summer grains, oilseeds, sugar cane, tobacco, hay and winter grains. Decreases in the production levels of groundnuts (37,3%), maize (29,7%), wheat (20,7%), grain sorghum (19,5%) and sugar cane (1,4%), had also impacted negatively on the income earned from field crops.

Compiled by Ephaphrus Mankwane

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Durban Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2013 to 2017.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting Fruit: Strawberry

Scientific name: *Fragaria ananassa*

Common names: **English:** garden strawberry, **Spanish:** fresa; freson; frutilla **French:** fraiser; fraisier a gros fruits, **Portuguese:** morango

History: The very first garden strawberry was grown in Britain, France, during the late 18th century. Prior to this, wild strawberries and cultivated selections from wild strawberry species were the common source of the fruit.

The strawberry fruit was mentioned in ancient Roman literature in reference to its medicinal use. The French began taking the strawberry from the forest to their gardens for harvest in the 14th century.

By the 16th century, references of cultivation of the strawberry became more common. People began using it for its supposed medicinal properties and botanists began naming the different species. In England, the demand for regular strawberry farming had increased by the mid-16th century. California produces more strawberries than any other state in the United States, producing about one billion every year.

Description: A strawberry is a small red fruit which is soft and juicy and has tiny yellow seeds on its skin.

Strawberry fruit are small, bright red cone (sometimes with a pinkish tinge) berries, densely covered with small stones, with juicy red pulp, have a sweet taste and characteristic aroma.

Strawberries are low-growing herbaceous plants with a fibrous root system and a crown from which arise basal leaves. The leaves are compound, typically with three leaflets, sawtooth-edged, and usually hairy.

The flowers, generally white, rarely reddish, are borne in small clusters on slender stalks arising, like the surface-creeping stems, from the axils of the leaves. As a plant ages, the root system becomes woody, and the "mother" crown sends out runners that touch ground and root, thus enlarging the plant vegetative. Botanically, the strawberry fruit is considered an "accessory fruit" and is not a true berry. The flesh consists of the greatly enlarged flower receptacle and is embedded with the many true fruits, or achenes, which are popularly called seeds.

Strawberry types

Summer-fruiting varieties have the largest fruit. They have a short but heavy cropping period over two or three weeks. There are early, mid-, and late fruiting cultivars cropping from early to mid-summer.

Perpetual strawberries – sometimes called ever bearers – produce small flushes of fruits from early summer to early autumn. The crops are not as heavy as the summer-fruiting ones and the fruits are smaller, with the plants less likely to produce runners. Perpetual strawberries are useful for extending the season

Cultivation Water frequently while new plants are establishing. Also water during dry periods. Strawberries are so versatile – they just need sun, shelter, and fertile, well-drained soil. Avoid areas prone to frost and soils that have previously grown potatoes, chrysanthemums, or tomatoes because they are all prone to the disease verticillium wilt.

Strawberries are traditionally grown in rows directly into garden soil. In poor soils grow in raised beds, which improves drainage and increases rooting depth. Alternatively, try growing in containers or growing-bags. Try to avoid wetting crowns and fruit as this can promote disease.

Health Benefits: At peak during spring and early summer, strawberries are sweet, tart, and juicy. Apart from their delicious taste, strawberries offer an abundance of health and wellness benefits. As a great source of fibre, vitamin C, and antioxidants, strawberries can benefit your health in the following ways.

1. IMPROVES IMMUNE FUNCTIONING

Just one serving of strawberries offers about 150 percent of the body's daily vitamin C requirement. This is essential for helping the body fight off infection and disease, from the common cold to the flu. Vitamin C also acts as an antioxidant, neutralizing free radicals that damage healthy DNA.

2. LOWERS BLOOD PRESSURE

Strawberries are an excellent source of potassium, which counters the effects of sodium in the body and reduces blood pressure. In addition to battling hypertension and related cardiovascular disease, a diet rich in potassium can help lower mortality risk in general.

3. TREATS SYMPTOMS OF ARTHRITIS AND GOUT

Free radicals contribute to the inflammation and deterioration of the muscles and tissues of the body. As a result, the joints do not function as they should and harmful toxins build up, causing conditions like arthritis and gout. The antioxidants in strawberries help detoxify the body and reduce inflammation.

4. OFFERS PROTECTION AGAINST CANCER

Special components found in strawberries called flavonoids have the power to fight cancer and oxidative stress. These flavonoids, such as anthocyanin, quercetin, and kaempferol act as a defensive line against the development of cancer and tumours.

Culinary Uses Strawberries can be combined with sugar and reduced over heat to make syrup. The syrup adds strawberry flavour to desserts such as cakes, pies and ice cream. Strawberry syrup can also be served with breakfast items like pancakes and waffles. Chefs use strawberry sauce to add colour to gourmet dessert plates.

Smoothies can be made with fresh or frozen strawberries. Such smoothies contain the fruit blended with ice, milk, yogurt and other fruit juices. Bananas, fresh mint leaves, protein powder and pineapple are common ingredients added to strawberry smoothies to enhance flavour and nutrition content.
