SECTION A

ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and final production estimate for summer crops for the 2021 production season

According to the final production estimate for summer crops by the Crop Estimates Committee (CEC) for the 2021 production season, the expected South African maize crop was 16,234 million tons, which was 6,1% more than the 15,300 million tons of the 2020 season and 27,5% or 3,498 million tons more than the five-year average of 12,218 million tons up to 2020.

The estimated area that South African commercial producers planted to maize during the 2021 season was 2,755 million ha. This was 5,5% or 144 600 ha more than the 2,611 million ha planted in the previous season. Of this area, 1,328 million ha (48,2%) were in the Free State, 580 000 ha (21,0%) in the North West and 525 000 ha (19,1%) in Mpumalanga.

The plantings of maize in the Free State increased by an estimated 8,8%, from 1,220 million ha in 2020 to 1,328 million ha in 2021 and in the North West it increased by 2,7%, from 565 000 ha to 580 000 ha. Plantings in Mpumalanga increased by an estimated 2,3%, from 513 000 ha in 2020 to 525 000 ha in 2021.

The ratio of white to yellow maize plantings for 2021 is 61:39, as against 62:38 the previous season. The estimated white maize plantings were 1,692 million ha, which were 4,7% more than the previous season's 1,616 million ha, while the yellow maize plantings were estimated to be 1,063 million ha—6,9% more than the 994 500 ha for 2020.

Most of the country's maize crop was produced in the Free State (43,1%), Mpumalanga (24,0%) and the North West (16,5%).

The production forecast for white maize was 8,609 million tons, which was 0,7% or 61 315 tons more than the 8,548 million tons of 2020 and 1,817 million tons more than the average of the five years up to 2020. The expected yield for white maize was 5,09 t/ha, as against 5,29 t/ha the previous season.

In the case of yellow maize, the production forecast was 7,625 million tons, which was 12,9% or 872 950 tons more than the 6,752 million tons of the previous season and 1,680 million tons more than the five-year average up to 2020. The yield for yellow maize was expected to be 7,17 t/ha, as against 6,79 t/ha in 2020.

The expected sunflower seed crop was 677 240 tons, which was 14,1% less than the 788 500 tons of the previous season and 14,4% less than the average of 791 500 tons for the five years up to 2020. The area planted to sunflower seed was estimated at 477 800 ha, which was 4,5% less than the 500 300 ha planted in 2020. The expected yield was 1,42 t/ha, as against 1,58 t/ha the previous season.

The production forecast for soya beans was 1,890 million tons, which was 51,8% more than the 1,246 million tons of the previous season. The estimated area planted was 827 100 ha, which was 17,3% or 122 100 ha more than the 705 000 ha planted in 2020. The expected yield was 2,29 t/ha, as against 1,77 t/ha in 2020.

The expected groundnut crop was 59 950 tons, which was 19,7% or 9 870 tons more than the 50 080 tons of the 2020 season and 12 708 tons more than the five-year average of 47 242 tons per annum up to 2020. The area planted to groundnuts was an estimated 38 550 ha, which was 2,8% or 1 050 ha more than the 37 500 ha planted the previous season. The expected yield was 1,56 t/ha, as against 1,34 t/ha in 2020.

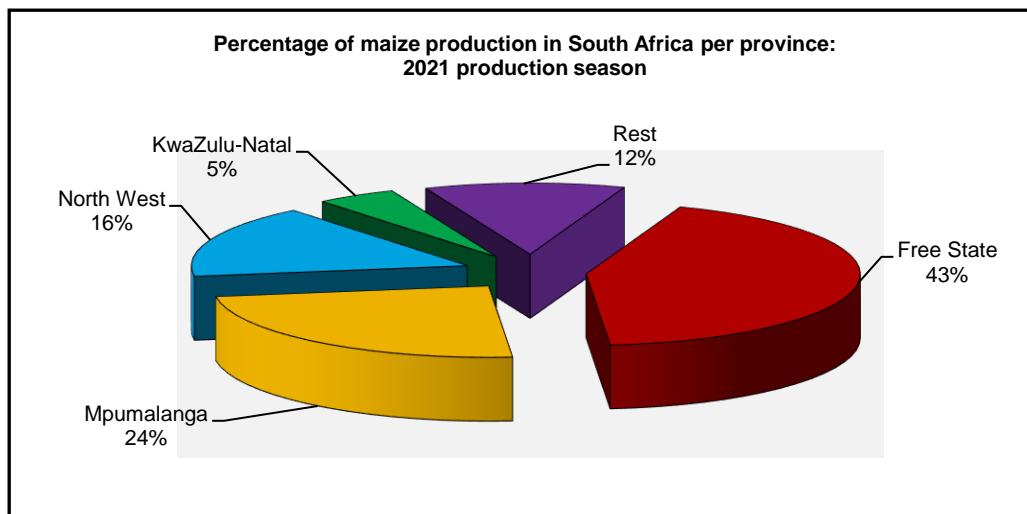

The production forecast for sorghum was 213 645 tons—35,2% more than the 158 000 tons of the previous season. The area planted to sorghum was estimated to be 49 200 ha, which was 15,8% or 6 700 ha more than the 42 500 ha planted in 2020. The expected yield was 4,34 t/ha, as against 3,72 t/ha the previous season.

The production of dry beans was expected to be 57 672 tons, which was 11,0% or 7 128 tons less than the 64 800 tons of the previous season and 3 903 tons more than the five-year average of 60 897 tons per annum up to 2020. The estimated area planted was 47 390 ha, which was 5,5% less than the 50 150 ha planted the previous season. The expected yield was 1,22 t/ha, as against 1,29 t/ha for 2020.

Area planted and final production estimate of summer field crops: 2021 production season*

Crop	Area planted 2021	Final estimate 2021	Area planted 2020	Final crop 2020	Change – tons 2021 vs 2020
	ha	Tons	ha	tons	%
White maize	1 691 900	8 608 815	1 616 300	8 547 500	+0,7
Yellow maize	1 063 500	7 625 450	994 500	6 752 500	+12,9
Total maize	2 755 400	16 234 265	2 610 800	15 300 000	+6,1
Sunflower seed	477 800	677 240	500 300	788 500	-14,1
Soya beans	827 100	1 890 450	705 000	1 245 500	+51,8
Groundnuts	38 550	59 950	37 500	50 080	+19,7
Sorghum	49 200	213 645	42 500	158 000	+35,2
Dry beans	47 390	57 672	50 150	64 800	-11,0

* Estimates exclude the non-commercial sector.

Fourth production forecast for winter crops for the 2021 production season

According to the fourth production forecast for 2021 released by the CEC on 25 November 2021, the expected wheat crop was 2,117 million tons, which is 0,1% or 2 565 tons less than the crop of 2,120 million tons of the previous season. The expected yield was 4,04 t/ha, as against 4,16 t/ha the previous season.

The main wheat producing areas for 2021 are within the Western Cape with 360 000 ha (68,8%), followed by the Free State with 70 000 ha (13,4%). The expected yield for the Western Cape was 3,20 t/ha, as against 3,38 t/ha the previous season and 4,95 t/ha for the Free State, compared to 4,40 t/ha.

The production forecast for malting barley was 339 800 tons. The area planted was estimated at 94 730 ha, while the expected yield was 3,59 t/ha.

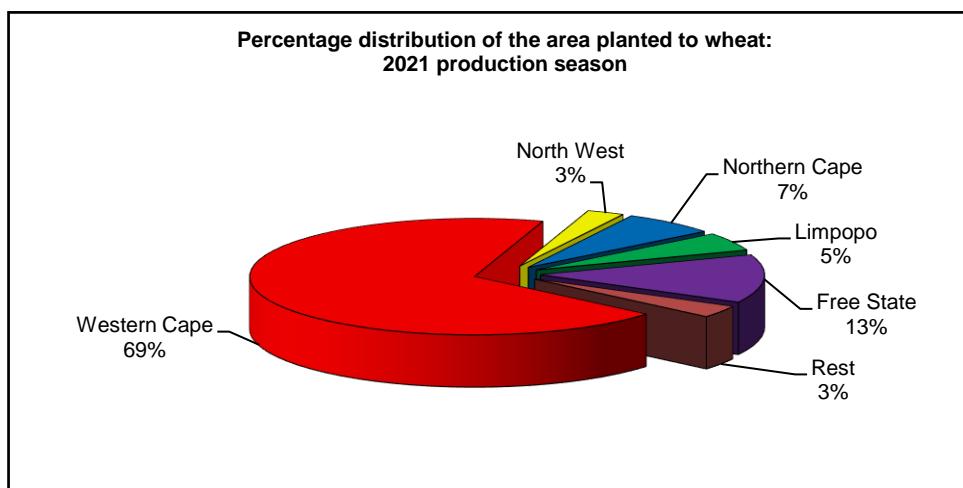

The expected canola crop was 190 000 tons, while the area estimate was 100 000 ha, with an expected yield of 1,90 t/ha. This is the largest canola crop produced in the history of South Africa.

The expected oats (cereals) crop was 80 450 tons. The area planted estimated at 36 250 ha, while the expected yield was 2,22 t/ha.

The expected sweet lupines crop was 30 800 tons, while the area estimate was 22 000 ha. The expected yield was 1,40 t/ha.

Area and production estimates for winter cereals: 2021 vs the 2020 production season

Crop	Area planted	Fourth forecast	Area planted	Final crop	Change – tons 2021 vs 2020
	2021	2021	2020	2020	(B)÷(D)
	(A)	(B)	(C)	(D)	%
Wheat	523 500	2 117 435	509 800	2 120 000	-0,1
Malting barley	94 730	339 800	141 690	588 000	-42,2
Canola	100 000	190 000	74 120	165 200	+15,0
Cereal oats	36 250	80 450	26 200	57 000	+41,1
Sweet lupines	22 000	30 800	N/a	N/a	-

2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	Oct. '19 to Sep. '20	Oct. '20 to Sep. '21	% change
Total gross farming income (R million)	324 879	371 344	+14,3
Expenditure on intermediate goods and services (R million)	188 125	199 736	+6,2
Total farming cost (R million)	229 149	240 997	+5,2
Net farming income (R million)	102 395	137 450	+34,2
Domestic terms of trade (2015 = 1)	1,01	1,00	-1,0

Gross income from major products at current prices

Field crops (R million)	Oct. '19 to Sep. '20	Oct. '20 to Sep. '21	% change
Maize	37 678	51 494	+36,7
Wheat	6 301	10 358	+64,4
Sugar cane	11 029	11 215	+1,7
Sunflower seed	4 412	5 721	+29,7
Tobacco	352	457	+29,8
All field crops	76 487	104 086	+36,1
Horticulture (R million)			
Vegetables (including potatoes)	29 045	29 073	+0,1
Deciduous and other fruit	24 402	28 317	+16,0
Citrus fruit	27 049	27 879	+3,1
Viticulture	5 822	6 248	+7,3
Subtropical fruit	5 036	5 399	+7,2
All horticultural products	101 570	108 201	+6,5
Animal products (R million)			
Poultry meat	49 305	50 005	+1,4
Cattle and calves slaughtered	36 520	41 971	+14,9
Milk	17 913	20 312	+13,4
Eggs	11 245	11 331	+0,8
Sheep slaughtered	7 952	8 022	+0,9
All animal products	146 822	159 057	+8,3

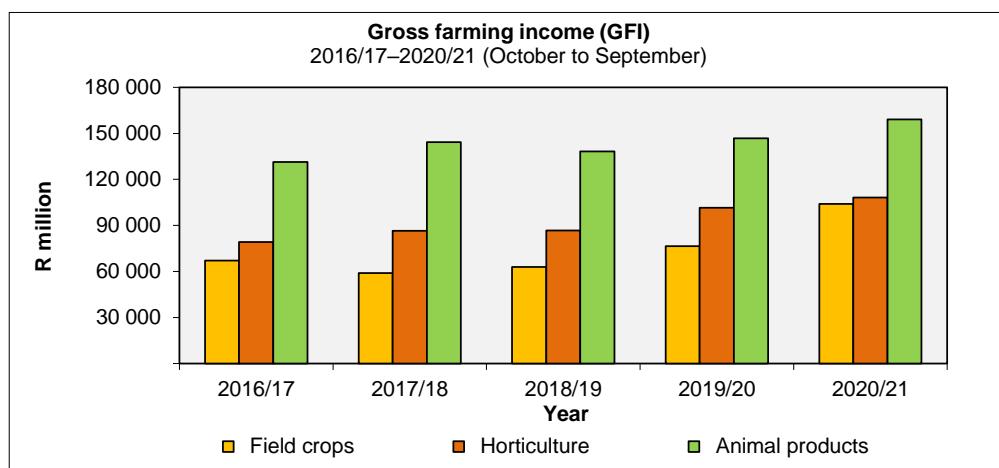

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 October 2020 to 30 September 2021. Aggregates are compared with the period 1 October 2019 to 30 September 2020.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

Gross farming income derived from all agricultural products increased by 14,3% to R371 344 million for the period ended September 2021, largely due to the increase in income from field crops by 36,1%, animal products by 8,3% and horticultural products by 6,5%.

The income earned from field crops increased by 36,1% (from R76 487 million to R104 086 million), mainly due to the increase in income from soya beans by 68,7%, wheat (64,4%), grain sorghum (54,8%), maize (36,7%), hay (33,5%), tobacco (29,8%), sunflower seed (29,7%) and sugar cane (1,7%). The income from cotton and dry beans decreased by 42,6% and 2,0%, respectively.

The income from horticultural products increased by 6,5% (from R101 570 million to R108 201 million) due to the increase in income from deciduous and other fruit by 16,0%, viticulture by 7,3%, subtropical fruit by 7,2%, citrus fruit by 3,1% and vegetables slightly by 0,1%.

The income from animal products increased by 14,3% and amounted to R371 344 million as the result of the increase in income made from cattle and calves slaughtered by 14,9%, milk by 13,4%, poultry meat by 1,4%, sheep slaughtered slightly by 0,9% and eggs slightly by 0,8%.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services increased by 6,2% and estimated at R199 202 million for the period ended September 2021. This was largely driven by the increase in expenditure on building and fencing material and seed and plants by 10,0% each, fertilisers (7,9%), farm feed (6,3%), farm services (6,0%), maintenance and repairs of machinery and implements (5,6%), packing material (4,4%), fuel (4,0%) and animal health and crop protection (0,5%).

Farm feeds had the largest share as an expenditure item, accounting for 35,6% of the total expenditure, farm services (10,8%), fertilisers (10,5%), fuel (8,8%), maintenance and repairs of machinery and implements (6,8%), building and fencing material and animal health and crop protection (4,2%) each, and packing material (4,0%).

Prices received and paid by farmers

Prices received by farmers for their agricultural products increased by 3,2% for the period ended 30 September 2021, compared to an increase of 6,2% the previous year.

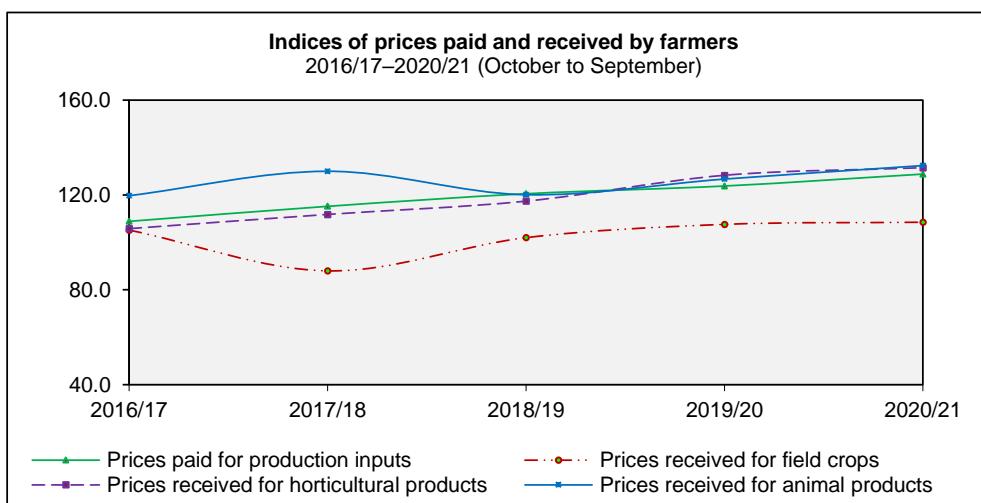

The weighted average price of field crops increased slightly by 0,8% due to the increases in prices of oilseeds by 26,4%, tobacco by 17,6%, summer grains by 15,5%, hay by 14,4%, sugar cane by 14,0%, dry beans by 10,6% and winter grains by 4,6%. The prices of cotton decreased by 1,8%.

The weighted average price of horticultural products increased by 2,6% as the result of the increase in the prices of vegetables by 7,2% and fruit by 1,9%. The prices of viticulture decreased by 10,1%.

The weighted average price of animal products increased by 4,5% mainly because of the increase in prices of pastoral products by 17,4%, milk by 11,4%, slaughtered stock by 6,4% and poultry meat slightly by 0,2%.

The prices paid for farming requisites, including machinery and implements, intermediate goods and services and material for fixed improvements increased by 4,1%. This was influenced by the increases in prices of seeds by 5,9%, building material (5,4%), fencing material (4,8%), fertilisers (4,7%), trucks (4,6%), feed and packaging material (4,0%) each, maintenance and repairs of machinery and implements and animal health and crop protection (3,8%), tractors (3,7%) and fuel (2,5%).

The domestic terms of trade decreased by 1,0% due to higher production costs, which increased by 4,1% more than the 3,2% increase in prices received by the farmers.

Farming income and cash flow

The increase of 14,3% in gross farming income and 6,2% in expenditure on intermediate production inputs resulted in the increase of 34,2% in net farming income. Interest payments increased by 7,5%, labour costs by 4,0% and rent payment by 3,8%.

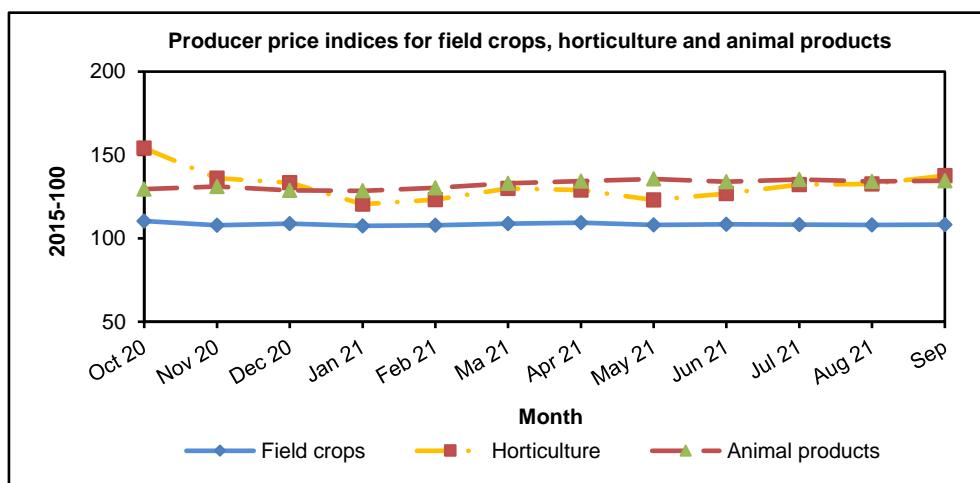

The farmers' cash flow increased by 32,3% and amounted to R135 535 million for the period ended September 2021, as opposed to R102 464 million the previous corresponding period.

Conclusion

The increase in gross farming income was driven by the increase in income obtained mainly from field crops by 36,1%, animal products by 8,2% and horticultural products by 6,5%. The increase in income from field crops and horticultural products was caused by the increase in production levels and prices, especially of oilseeds by 26,4%, tobacco by 17,6%, summer grains by 15,5%, hay by 14,4%, sugar cane by 14,0%, dry beans by 10,6% and vegetables by 7,2%.

2. INDICES OF PRODUCER PRICES OF AGRICULTURAL PRODUCTS

Product	Weight	July		August		September	
		2020	2021	2020	2021	2020	2021
		Index (2015 = 100)

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Bloemfontein Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received, based on the average for the five-year period 2016 to 2020.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting vegetable: Radish

Common names: wild radish, white charlock or jointed charlock

Scientific name: *Raphanus raphanistrum* subsp. *sativus*

History: The history of the radish dates back to ancient Egypt. It was supplied by the pharaohs as a staple food for the labour community that built the pyramids. It was learned that the Chinese started cultivating them earlier in 700 B.C., who gave it as a gesture of good will to Japan, where it has become the most favoured vegetable and was included in almost all the dishes.

The introduction of the radish to England started in the 1500s, and it was believed to cure kidney stones, intestinal worms and aid in getting a blemish-free complexion. The radish crossed the Atlantic when the colonists came along with the seeds, and this vegetable has been popular ever since.

Description: Radishes are annual or biennial brassicaceous crops grown for their swollen tap roots, which can be globular, tapering, or cylindrical. The root skin colour ranges from white through pink, red, purple, yellow, and green to black, but the flesh is usually white.

The roots obtain their colour from anthocyanins. Red varieties use the anthocyanin pelargonidin as a pigment, and purple cultivars obtain their colour from cyanidin. Smaller types have few leaves about 13 cm long with round roots up to 2,5 cm in diameter or slenderer, longer roots up to 7 cm in length. Both of these are normally eaten raw in salads.

A longer root form, including oriental radishes, daikon (also called mooli) and winter radishes, grow up to 60 cm in length with foliage about 60 cm high spreading 45 cm wide. The flesh of radishes harvested timely is crisp and sweet, but becomes bitter and tough if the vegetable is left in the ground too long. Leaves are arranged in a rosette. They have a lyrate shape, meaning they are divided pinnately with an enlarged terminal lobe and smaller lateral lobes. The white flowers are borne on a racemose inflorescence. The fruit are small pods which can be eaten when young.

Types of Radish:

- White Icicle: This pungent, white radish measures 13 – 20 cm in length.
- Sparkler: A round, bright red radish with a distinctive white tip and is all white on the inside.

- Cherry Belle: This round, red radish is the common variety often found in local supermarkets. It is delicious in salads.
- White Beauty: A small, round radish with a sweet, juicy flavour and is white on the inside and outside.
- French Breakfast: This mild, extra-crunchy, slightly pungent radish is good raw or cooked.
- Early Scarlet Gold: A juicy, crispy-tender heirloom variety with a round shape, red skin and white flesh.
- Daikon Long White: Daikon are huge radishes that can reach lengths of 46 cm measuring 7,5 cm in diameter.
- Fire and Ice: Appropriately named oblong radish that is bright red on the top half and pure white on the bottom half. These are sweet, mild and delicate in flavour and texture.

Health benefits:

Radishes are a good source of antioxidants like catechin, pyrogallol, vanillic acid, and other phenolic compounds. These root vegetables also have a good amount of vitamin C, which acts as an antioxidant to protect cells from damage.

Reduced risk for diabetes

Radishes contain chemical compounds like glucosinolates and have thiocyanates that can help regulate blood sugar levels. Eating radishes also enhances the body's natural adiponectin production. Higher levels of this hormone can help to protect against insulin resistance. Radishes also contain coenzyme Q10, an antioxidant that helps to halt the development of diabetes.

Enhanced liver function

Along with other compounds, radishes contain indole-3-carbinol and 4-methylthio-3-butenyl-isothiocyanate, which help the liver detoxify and heal damage. These same compounds also help the kidneys flush out toxins.
