SECTION A

ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Preliminary estimate of areas planted to summer field crops for the 2023 production season

The preliminary estimate of areas planted to summer crops for the 2023 production season was released by the Crop Estimates Committee (CEC) on 26 January 2023.

The estimate for maize was 2,544 million ha, which is 3,0% less than the 2,623 million ha planted the previous season and 1,8% less than the intended plantings figure of 2,591 million ha released in October 2022.

The area estimate for white maize was 1,476 million ha, which represents a decrease of 6,3% from the 1,575 million ha planted for the 2022 season. In the case of yellow maize, the area estimate was 1,068 million ha, which is 1,9% more than the 1,048 million ha planted for 2022.

The preliminary area estimate for sunflower seed was 568 550 ha, which is 15,2% less than the 670 700 ha planted the previous season. It was also estimated that 1,100 million ha had been planted to soya beans, which represents an increase of 18,8% from the 925 300 ha planted for the 2022 season.

For groundnuts, the area estimate was 31 200 ha, which is 28,1% less than the 43 400 ha planted the previous season. The area planted to sorghum decreased by an estimated 8,6%, from 37 200 ha to 34 000 ha. In the case of dry beans, the area estimate was 34 500 ha, which is 19,6% less than the 42 900 ha planted the previous season.

Preliminary estimate of areas planted to summer grain crops: 2023

Crop	Area planted 2023	Area planted 2022	Final crop 2022	Change in area 2023 vs 2022
	ha	ha	tons	%
White maize	1 476 000	1 575 000	7 850 000	-6,3
Yellow maize	1 068 000	1 048 000	7 620 000	+1,9
Maize	2 544 000	2 623 000	15 470 000	-3,0
Sunflower seed	568 550	670 700	845 550	-15,2
Soya beans	1 099 500	925 300	2 230 000	+18,8
Groundnuts	31 200	43 400	48 500	-28,1
Sorghum	34 000	37 200	103 140	-8,6
Dry beans	34 500	42 900	52 590	-19,6

Sixth production forecast for winter field crops for 2022

According to the sixth production forecast of winter crops, also released by the CEC on 26 January 2023, the expected wheat crop for 2022 was 2,177 million tons, which is 4,7% or 108 460 tons less than the 2,285 million tons of the previous season. The expected yield was 3,84 t/ha, compared to 4,36 t/ha the previous season. The area estimate for wheat was 566 800 ha, as against 523 500 ha for 2021—an increase of 8,3%.

The main contributing provinces to the expected wheat crop were the Western Cape, with a production forecast of 954 000 tons (43,8%), followed by the Free State with 460 800 tons (21,2%) and the Northern Cape with 343 100 tons (15,8%). The expected yield for the Western Cape was 2,65 t/ha, which is 24,3% lower than the 3,50 t/ha of the previous season. A yield of 4,80 t/ha was expected for the Free State, which is 6,6% lower than the 5,14 t/ha for 2021. The expected yield for the Northern Cape was 7,30 t/ha, compared to 7,75 t/ha the previous season—a decrease of 5,8%.

The production forecast for malting barley was 337 650 tons, which is 1,1% or 3 650 tons higher than the 334 000 tons of the previous season. The area planted was estimated at 101 000 ha and the expected yield was 3,34 t/ha.

The expected canola crop was 210 530 tons, while the area estimate was 123 510 ha, with an expected yield of 1,70 t/ha.

The expected crop for oats for the 2022 season was 33 800 tons and the area estimate was 27 000 ha. The expected yield was 1,25 t/ha.

In the case of sweet lupines, the production forecast was 15 750 tons. The area estimate was 21 000 ha, with an expected yield of 0,75 t/ha.

Estimated areas planted and sixth production forecast for winter cereals: 2022

Crop	Area planted 2022	Sixth forecast 2022	Area planted 2021	Final crop 2021	Change in production 2022 vs 2021
	ha	tons	ha	tons	%
Wheat	566 800	2 176 540	523 500	2 285 000	-4,7
Barley	101 000	337 650	94 730	334 000	+1,1
Canola	123 510	210 530	100 000	198 100	+6,3
Oats	27 000	33 800	36 250	59 000	-42,7
Sweet lupines	21 000	15 750	22 000	28 600	-44,9

2 ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	Jan. to Dec. 2021	Jan. to Dec. 2022	% change
Total gross farming income (R million)	362 575	417 783	+15,2
Intermediate expenditure (R million)	205 438	233 914	+13,9
Total farming cost (R million)	279 503	312 422	+11,8
Net farming income (R million)	87 602	110 423	+26,1
Domestic terms of trade (2015 = 1)	1,06	1,03	-2,8

Gross income from major products at current prices

	Jan. to Dec. 2021	Jan. to Dec. 2022	Change
Field crops:	R million		%
Maize	46 994	64 826	+37,9
Wheat	11 458	12 607	+10,0
Sugar cane	11 205	12 037	+7,4
Sunflower seed	5 826	8 688	+49,1
Cotton	366	314	-14,1
All field crops	100 969	129 008	+27,8
Horticulture:			
Vegetables (including potatoes)	28 756	30 399	+5,7
Deciduous and other fruit	28 960	30 996	+7,0
Citrus fruit	26 008	27 468	+5,6
Viticulture	6 649	6 281	-5,5
Subtropical fruit	5 544	6 548	+18,1
All horticultural products	105 138	111 262	5,8
Animal products:			
Poultry meat	50 595	59 016	+16,6
Cattle and calves slaughtered	43 230	49 324	+14,1
Milk	21 170	23 844	+12,6
Eggs	10 620	12 600	+18,7
Sheep slaughtered	8 922	8 890	-0,4
All animal products	156 469	177 513	+13,4

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 January to 31 December 2022. Aggregates are compared with the period 1 January to 31 December 2021.

Gross farming income

Gross farming income refers to both the part of agricultural production that is marketed and production for own consumption, valued at basic prices.

Total gross income earned from all agricultural products was R417 783 million in 2022 compared with R362 575 million in 2021, which is an increase of 15,2%. This was driven by the increase in income from field crops by 27,8%, animal products by 13,4% and horticultural products by 5,8%.

The increase of 27,8% or R28 039 million in income from field crops resulted from the increase in income derived from maize by R17 832 million (37,9%), soya beans by R5 328 million (38,6%), sunflower seed by R2 862 million (49,1%), wheat by R1 149 million (10,0%), sugar cane by R832 million (7,4%), canola by R490 million (27,9%) and dry beans by R231 million (26,0%). The income from grain sorghum decreased by 51,%, groundnuts (25,6%), cotton (14,15) and tobacco slightly (0,7%).

The income from animal products increased by R21 047 million or 13,4% due to the increase in income from poultry meat by R8 421 million (16,6%), cattle and calves slaughtered by R6 094 million (14,1%), milk by R2 674 million (12,6%), eggs by R1 981 million (18,7%) and pigs slaughtered by R1 056 million (11,9%).

The 5,8% or R6 124 million increase in income from horticultural products is attributed to the increase in income from deciduous and other fruit by R2 036 million (7,0%), vegetables by R1 643 million (5,7%), citrus fruit by R1 460 million (5,6%) and subtropical fruit by R1 004 million (18,1%). The income derived from viticulture decreased by R368 million (5,5%).

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of the goods and services that were purchased to be consumed as inputs during the production process.

The expenditure on intermediate goods and services increased by 13,9% to R233 914 million in 2022, from R205 438 million in 2021. This was influenced by the increase in expenditure on fertilisers by 22,0%, farm feed by 20,0%, fuel by 10,8%, seed and plants and building and fencing material by 10,0% each, animal health and crop protection by 8,8%, maintenance and repairs of machinery and implements by 8,0%, farm services by 6,0% and packing material by 5,2%.

Proportionally, farm feed had the largest share of 37,6% as an expenditure item, followed by fertilisers (11,2%), farm services (9,9%), fuel (8,4%), maintenance and repairs of machinery and implements (6,7%), seed and plants (6,5%), building and fencing material (4,0%), and animal health and crop protection and packing material (3,9%) each.

Prices received and paid by farmers as well as terms of trade

The prices received by farmers for their products increased by 13,2% because of the increase in prices of field crops by 28,8%, animal products by 12,5% and horticultural products by 2,2%.

The 28,8% increase in the weighted average price of field crops resulted from the increase in prices of summer grains by 45,5%, winter grains by 30,3%, oilseeds by 17,4%, dry beans by 11,0%, sugar cane by 6,5% and hay by 4,3%. The prices of tobacco and cotton decreased by 5,6% and 1,7%, respectively.

The weighted average price of animal products increased by 12,5% due to the increase in prices of poultry meat by 14,6%, dairy products by 13,4%, slaughtered stock by 11,3% and pastoral products slightly by 0,4%.

The weighted average price of horticultural products increased by 2,2%, mainly because of the increase in prices of vegetables and viticulture by 6,8% and 2,7%, respectively. The price of fruit decreased by 1,0%.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements as well as intermediate goods, increased by 13,6%. This was caused by the increases in prices paid for fertilisers by 39,8%, fuel (15,7%), building material (11,4%), feed (11,0%), fencing material (8,7%), animal health and crop protection (8,1%), seeds (7,7%), irrigation equipment (7,3%), maintenance and repairs of machinery and implements (5,7%), packing material (5,0%), and tractors and trucks (4,1%) each.

The terms of trade decreased by 1,0% (from 1,01 in 2021 to 1,00 in 2022) mainly due to the production costs which increased by 13,6% more than the prices received for the agricultural products (13,2%).

Net farming income and cash flow

The increase of 15,2% in gross farming income against the increase of 13,9% in expenditure on production inputs resulted in a substantial increase of 26,1% in net farming income. The interest payment increased by 8,4%, while labour costs and rent payment increased by 6,9% each.

The farmers' cash flow showed a significant increase of 24,8% and estimated to be R109 567 million in 2022 compared to R87 816 million in 2021.

Conclusion

The increase in gross farming income is attributed to the higher prices farmers received for field crops and animal products, as well as the increased production volumes of horticultural products (5,9%). The production volumes of both field crops and animal products decreased slightly by 0,2% and 0,1%, respectively.

The farming expenses showed an increase in 2022 when compared to the previous 12 months up to December 2021, due to the higher prices of production inputs such as fertilisers, feed and fuel.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS AND GRAPHIC PRESENTATION OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold and prices realised may differ considerably among the various markets.

The graphs in this overview depict the trends for fruit and vegetables sold on the Kimberly Fresh Produce Market and give an indication of the variations in monthly volumes sold and prices received based on the average for the five-year period 2018 to 2022.

Detailed information regarding the specific varieties of fruit and vegetables sold on the markets is available on request from:

Interesting plant: Turmeric

Common names: Curcumin, Curcuma Longa, Turmeric Root, Wild Curcuma.

Scientific name: Curcuma

History: Turmeric grows wild in the forests of South and Southeast Asia, where it is collected for use in classical Indian medicine (Siddha or Ayurveda).

Turmeric was found in Farmana, dating back to between 2600 and 2200 BCE, and in a merchant's tomb in Megiddo, Israel, dating from the second millennium BCE. It was noted as a dye plant in the Assyrians' Cuneiform medical texts from Ashurbanipal's library at Nineveh from 7th century BCE. In Medieval Europe, turmeric was called "Indian saffron."

Description: Turmeric is a perennial herbaceous plant that reaches up to 1 m (3 ft 3 in) tall. It has highly branched, yellow to orange, cylindrical, aromatic rhizomes.

The leaves are alternate and arranged in two rows. They are divided into leaf sheath, petiole, and leaf blade. From the leaf sheaths, a false stem is formed. The petiole is 50 to 115 cm (20–45 in) long. The simple leaf blades are usually 76 to 115 cm (30–45 in) long and rarely up to 230 cm (7 ft 7 in). They have a width of 38 to 45 cm (15 to 17+½ in) and are oblong to elliptical, narrowing at the tip. At the top of the inflorescence, stem bracts are present on which no flowers occur; these are white to green and sometimes tinged reddish-purple, and the upper ends are tapered.

In East Asia, the flowering time is usually in August. Terminally on the false stem is an inflorescence stem, 12 to 20 cm (4+½ to 8 in) long, containing many flowers. The bracts are light green and ovate to oblong with a blunt upper end with a length of 3 to 5 cm (1 to 2 in).

Turmeric is a deep, golden-orange spice known for adding colour, flavour, and nutrition to foods. A relative of ginger, turmeric comes from the rhizome (root) of a native Asian plant and has been used in cooking for hundreds of years. It has also been used in Ayurveda and other forms of traditional medicine in China and India.

Health benefits: Turmeric contains protective bioactive compounds:

Colourful plant foods are good for our health, thanks to their plant pigments, and turmeric is no exception. Much of the publicity around the spice is due to curcumin, the main active component which makes up about 3% of the root by weight. Although an impressive constituent, curcumin is just one of hundreds of bioactive compounds found in turmeric.

Has antioxidant properties: The value of protective compounds like curcumin is that they help the body combat the damaging effects of cell oxidation. Over time, this process may lead to chronic inflammation and, as a result, age-related conditions such as heart disease, type 2 diabetes and cancer.

Including protective antioxidant foods in our diet makes our bodies better placed to cope with ageing and the inflammation associated with it. It also helps with exercise-induced inflammation and muscle soreness.

Help ease arthritis: Studies comparing the anti-inflammatory properties of turmeric with those of non-steroidal anti-inflammatory drugs (NSAIDs) have shown great promise. Studies exploring curcumin's therapeutic potential as a treatment for arthritis have also been encouraging.

Support those with Alzheimer's or dementia: Another active ingredient in turmeric is turmerone. Although less is known about turmerone, studies suggest it may be useful for treating conditions such as stroke and Alzheimer's disease since it helps trigger cell repair and may potentially support the recovery of brain function.

Lower the risk of cardiovascular disease: Studies suggest the antioxidant and anti-inflammatory effects of curcumin may protect against some of the steps inherent in the development of heart disease, such as helping balance cholesterol levels.

Support the immune system: According to studies, curcumin may act as an immune system modulator, influencing important immune cells; these include T cells, B cells and Natural Killer cells. In

addition, curcumin appears to down-regulate pro-inflammatory cytokines, compounds whose prolonged activity can lead to the damage caused by inflammation.

When consumed at low doses, curcumin may also enhance our antibody responses, helping us fight off infection. Animal studies suggest it may even play a role in controlling allergic conditions such as hay fever.

Help prevent cancer: Curcumin also appears to lead to a number of cellular changes that may help in the fight against cancer. Active at different stages of cancer development, studies suggest curcumin may help limit the growth of new blood vessels in tumours, reduce the spread of cancer and contribute to the death of cancer cells.

May boost mood: it is curcumin that is responsible for helping the spice lift our mood and alleviate some of the symptoms of depression. One study examining its anti- depressive effects found that curcumin was as effective as the drug, Prozac.

There's also a suggestion that curcumin may boost feel-good brain chemicals, including the neurotransmitters serotonin and dopamine.

Help with memory: Curcumin increases the levels of a brain hormone called brain-derived neurotrophic factor (BDNF). This helps promote the life of nerve cells and plays an important role in memory and learning.

Have anti-ageing properties: Curcumin may help slow the ageing process by activating certain proteins and protecting cells from damage. Thus, it may delay the progression of age-related conditions and alleviate the associated symptoms.
