ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Preliminary estimate of areas planted to summer field crops for the 2024 production season

The preliminary estimate of areas planted to summer crops for the 2024 production season was released by the Crop Estimates Committee (CEC) on 30 January 2024.

The estimate for maize was 2,638 million ha, which is 2,00% more than the 2,586 million ha planted the previous season and 0,04% more than the intended plantings figure of 2,637 million ha released in October 2023.

The area estimate for white maize was 1,557 million ha, which represents an increase of 2,36% from the 1,521 million ha planted for the 2023 season. In the case of yellow maize, the area estimate was 1,080 million ha, which is 1,47% more than the 1,065 million ha planted for 2023.

The preliminary area estimate for sunflower seed was 613 200 ha, which is 10,35% more than the 555 700 ha planted the previous season. It was also estimated that 1,037 million ha had been planted to soya beans, which represents a decrease of 9,73% from the 1,148 million ha planted for the 2023 season.

For groundnuts, the area estimate was 41 200 ha, which is 31,63% more than the 31 300 ha planted the previous season. The area planted to sorghum increased by an estimated 16,47%, from 34 000 ha to 39 600 ha. In the case of dry beans, the area estimate was 39 400 ha, which is 7,50% more than the 36 650 ha planted the previous season.

Preliminary estimate of areas planted to summer grain crops: 2024.

Sixth production forecast for winter field crops for 2023

According to the sixth production forecast of winter crops, also released by the CEC on 30 January 2024, the expected wheat crop for 2023 was 2,089 million tons, which is 0,98% or 20 775 tons less than the 2,110 million tons of the previous season. The expected yield was 3,88 t/ha, compared to 3,72 t/ha the previous season. The area estimate for wheat was 537 950 ha, as against 566 800 ha for 2022—a decrease of 5,09%.

The main contributing provinces to the expected wheat crop were Western Cape, with a production forecast of 1,095 million tons (52,41%), followed by Northern Cape with 300 000 tons (14,36%) and Free State with 295 200 tons (14,13%). The expected yield for Western Cape was 3,00 t/ha, which is 17,65% higher than the 2,55 t/ha of the previous season. A yield of 7,50 t/ha was expected for Northern Cape, which is 4,17% higher than the 7,20 t/ha for 2022. The expected yield for Free State was 4,10 t/ha, compared to 4,55 t/ha the previous season—a decrease of 9,89%.

The production forecast for malting barley was 376 195 tons, which is 24,57% or 74 195 tons higher than the 302 000 tons of the previous season. The area planted was estimated at 107 600 ha and the expected yield was 3,50 t/ha.

The expected canola crop was 237 450 tons, while the area estimate was 131 200 ha, with an expected yield of 1,81 t/ha.

The expected crop for oats for the 2023 season was 40 250 tons and the area estimate was 27 500 ha. The expected yield was 1,46 t/ha.

In the case of sweet lupines, the production forecast was 16 000 tons. The area estimate was 16 000 ha, with an expected yield of 1,00 t/ha.

Estimated areas planted and sixth production forecast for winter cereals: 2023.

3. ECONOMIC OVERVIEW

This article gives an overview of the major macroeconomic trends in the agricultural sector for the period 1 January to 31 December 2024. Aggregates are compared to the period 1 January to 31 December 2023.

Gross farming income

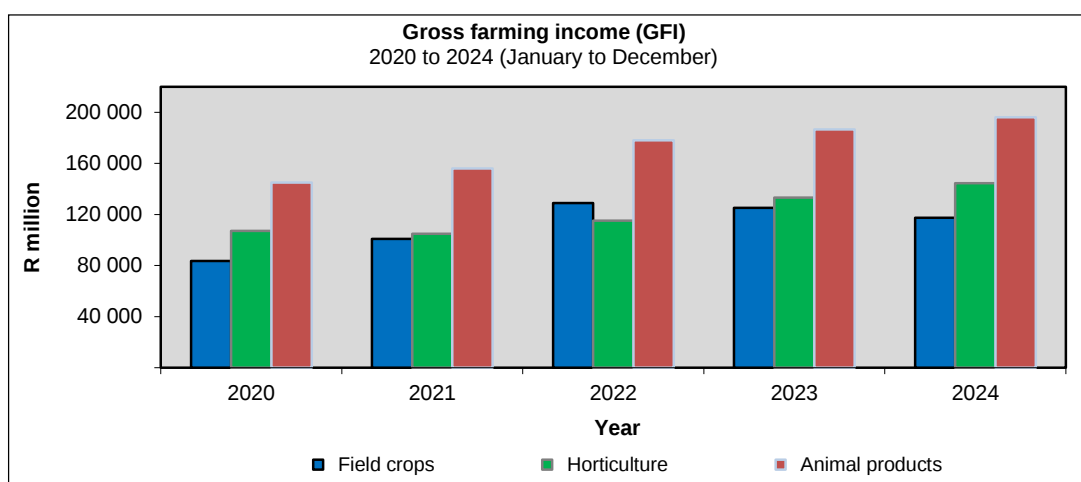

Gross farming income refers to both the part of agricultural production that is marketed and production for own consumption, valued at basic prices.

Total gross farming income generated from all agricultural products increased by 3,4% and was estimated at R460 208 million in 2024. This can be attributed to the increase in income from horticultural and animal products by 8,4% and 6,2%, respectively.

Income from field crops showed a decreased of 6,2% and amounted to R117 521 million. This was caused by the decrease in income earned from soya beans by 36,9%, grain sorghum by 13,5%, wheat by 13,3%, cotton by 13,1%, sunflower seed by 7,9% and groundnuts by 1,4%.

Income from horticultural products increased by 8,4% to R144 497 million, largely because of the increase in income from subtropical fruit by 15,0%, deciduous and other fruit (10,9%), viticulture (10,0%), citrus fruit (6,0%) and vegetables (1,5%).

The increase of 6,2% in income from animal products was mainly due to the increase in income earned from eggs by 13,7%, poultry meat (9,8%), pigs slaughtered (5,9%), cattle and calves slaughtered (3,9%) and milk (2,5%).

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of the goods and services that were purchased to be consumed as inputs during the production process.

The expenditure on intermediate goods and services showed an increase of 1,6% and was estimated to be R251 255 million in 2024, as compared to R247 191 million in 2023. This was mainly driven by the increase in expenditure on fertilisers by 11,7%, building and fencing material by 10,0%, packing material by 7,9%, farm services by 6,0%, maintenance and repairs of machinery and implements by 5,5%, and fuel by 4,5%. The expenditure on animal health and crop protection decreased by 17,7%, seed and plants by 14,4% and farm feeds by 2,4%.

Farm feeds remained the main expenditure item, accounting 31,7% of the total expenditure, followed by fertilisers (15,6%), farm services (10,4%), fuel (8,6%), maintenance and repairs of machinery and implements (7,1%), seed and plants (5,7%), building and fencing material (4,5%), packing material (4,2%) and animal health and crop protection (3,8%).

Prices received and paid by farmers as well as terms of trade.

The prices received by farmers for their products increased by 4,8%, due to the increase in prices of field crops by 9,1%, animal products by 4,4% and horticultural products by 2,2%.

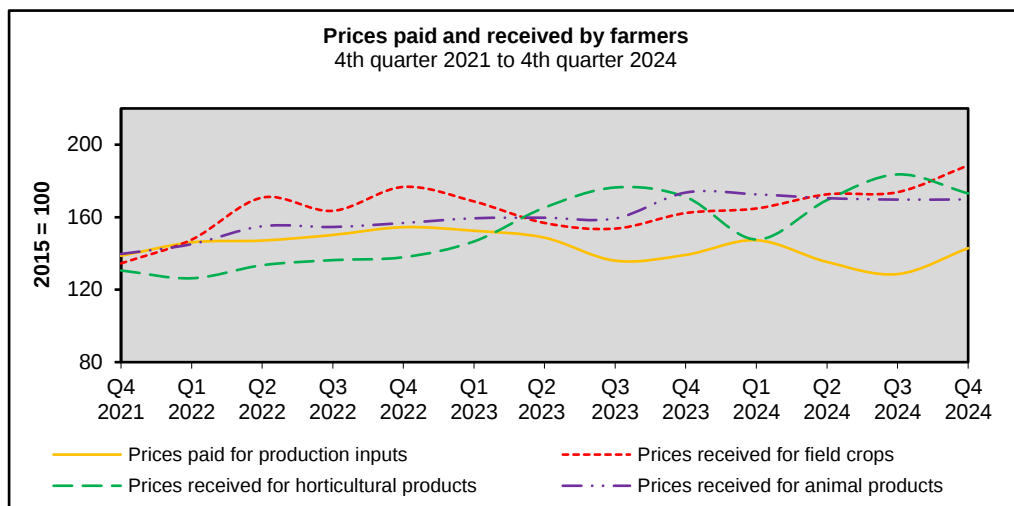

The increase in the weighted average price of field crops was the result of the increase in prices of summer grains by 21,2%, tobacco by 12,1%, sugar cane by 11,9% and hay by 5,2%. The prices of winter grains decreased by 11,3%, dry beans (5,2%), oilseeds (2,0%) and cotton slightly (0,6%).

The weighted average price of horticultural products increased by 2,2%, mainly because of the increases in prices of viticulture and fruit by 16,1% and 7,1%, respectively. The price of vegetables decreased by 6,2%.

The weighted average price of animal products increased by 4,4% and was driven by the increase in the price of poultry meat by 9,8%. The prices of slaughtered stock, milk and pastoral products remained unchanged.

The prices paid for farming requisites, including machinery and implements, material for fixed improvements as well as intermediate goods, decreased by 3,9%, as opposed to a decrease of 3,6% the previous period. This was mainly due to the decrease in prices of animal health and crop protection by 13,7%, fertilisers (3,4%), feed (2,1%) and fuel (1,9%).

The terms of trade increased by 8,8% from 1,13 in 2023 to 1,23 in 2024, as the result of the increase of 4,8% in prices received from the agricultural production, against the 3,9% decrease in agricultural production costs.

Net farming income and cash flow

The increase in gross farming income by 3,4% against the 1,6% increase in expenditure on production inputs, led to an increase of 13,9% in net farming income. The interest payment increased by 11,8%, while rent payment and labour remuneration increased by 4,5% each.

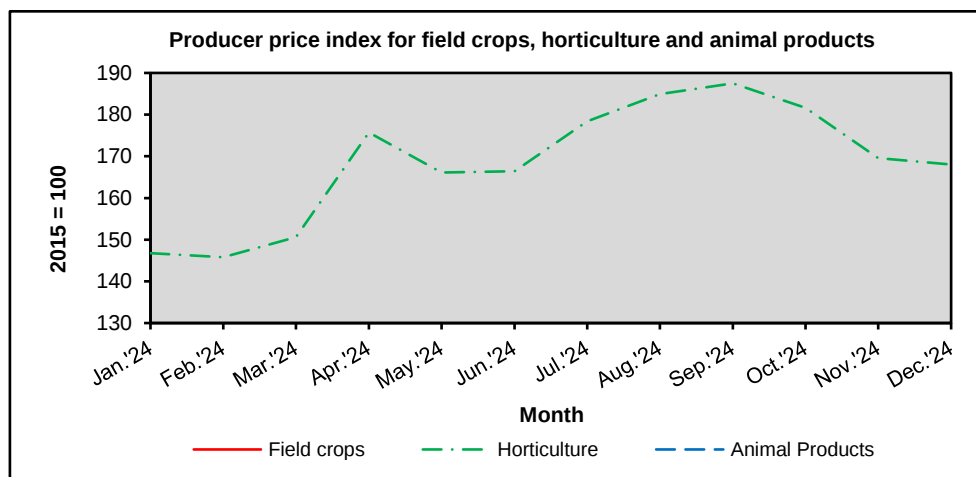

The farmers' cash flow increased by 13,5% and was estimated at R125 901 million in 2024, compared to R110 879 million in 2023, due to improved net farming income.

Conclusion

The increase in gross farming income was largely driven by the increase in production levels of cattle and calves slaughtered (6,5%), subtropical fruit (3,3%), vegetables (3,2%), milk (1,9%), deciduous and other fruit and citrus fruit (1,6%) each, as well as the increase in prices of summer grains, viticulture, poultry meat, fruit, tobacco and hay.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold, and prices realised, may differ considerably among the various markets.

Detailed information regarding fruit and vegetables sold on the markets is available on request from:
Directorate: Statistics and Economic Analysis.
