How to estimate the age of cattle

— Jenny Turton —

You can estimate the age of cattle by looking at the teeth. Old animals with worn teeth cannot eat well and will lose condition.
How to check the teeth

Baby teeth (milk teeth):
under 2 years of age

2 tooth: 2–2½ years
4 tooth: 2½–3 years

6 tooth: 3–3½ years

Full mouth: 4 years

Worn: over 4 years
